NOTICES TO AIRMEN

SPECIAL NOTICES

NAVY SPECIAL NOTICES

NAVY DATA: In accordance with Hydrographic Office Memorandum for Aviators, No. 17, September 17, 1948, before any changes or modifications of any aid to air navigation, such as realignment of radio ranges, modified instrument approach procedures, relocation of fan markers, etc., can be published by the Hydrographic Office, the Command requesting the change must first obtain approval from the Office of Chief of Naval Operations, Navy Department, Washington 25, D. C. When an approved change or modification has been made to any aid to air navigation, the Command shall immediately notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C.

All Naval Air Stations and Air Facilities are directed to notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C., direct, of all contemplated **or immediate changes in their field facilities, operation rules, air-ground communication facilities, GCA, etc., and other factors affecting safe operation of aircraft which do not necessitate approval from CNO. This may be done by letter, speedletter, or dispatch, as applicable.**

In accordance with Chief of Naval Operations Aviation Circular Letter 19-49 March 2, 1949, approval for the closing of any Navy or Marine Corps Air Station or Air Facility to transient military aircraft for a period in excess of ten days must be obtained from the Chief of Naval Operations.

Commanding Officers of Naval and Marine Corps aviation activities are directed to review all information published by the Hydrographic Office, U. S. Air Force, Civil Aeronautics Administration, and Coast and Geodetic Survey on facilities under their command and immediately forward any corrections or approved amendments direct to the publishing agency. A copy of the corrections or amendments to information published by other agencies should be forwarded to the Hydrographic Office. The charts and publications issued by the above-mentioned agencies must be currently maintained in order that all aviators can be kept informed of changes to airfields, seaplane anchorages, navigational aids, and other factors affecting the safe operation of aircraft.

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA: Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to: Commanding Officer, USAF Aeronautical Chart and Information Service, Washington 25, D. C.; Attn: Aeronautical Information Division.

Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over ten days should be forwarded through channels to Headquarters, U. S. Air Force. Restrictions in Air National Guard fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration by Headquarters, USAF ACIS.

In connection with the above, the attention of all base operations officers is invited to A.F. Regulation 55-12 of July 1, 1949, subject, "Notices to Airmen", A. F. Regulation 5-16 of February 20, 1948, subject, "Responsibilities for Flight Publications", and to A. F. Regulation 60-23 of September 23, 1947, subject, "Restrictions on Landing at Army Airfields".

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of Air Force Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the nearest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant to itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

SPECIAL CHARTS OF ATOMIC ENERGY AIRSPACE RESERVATIONS: The Atomic Energy Commission has issued a special chart depicting airspace reservations in the United States. Copies of this chart are being supplied each Air Force Base, AF Reserve Unit, National Guard Unit and other activities on the same mailing list basis as used for Airman's Guide. Operations officers should prominently display this chart and assure that pilots contemplating flight adjacent to these areas are briefed upon their existence, location and restricted status.

UTILIZATION OF CAA VAR STATIONS BY MILITARY AIRCRAFT: The attention of pilots is directed to the fact that voice facilities are available at many VAR stations (see pages 90 thru 103, A. N. 08-15-1), and CAA communications stations are located thereat. Such VAR facilities should be utilized for navigational aid and communications services, particularly when standard low frequency facilities are not available.

AIR FORCE FOREIGN CLEARING STATIONS: Under the authority of Air Force Regulation 60-8 of July 6, 1949, U. S. Air Force aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated:

AFRICA and AZORES: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; Westover AFB, Mass.

ALASKA: Great Falls AFB, Mont.; McChord AFB, Wash.; Travis AFB, Calif.

BERMUDA: Brookley AFB, Ala.; MacDill AFB, Fla.; Mitchel AFB, N. Y.; Washington National Airport, D. C.; Travis AFB, Calif.; Westover AFB, Mass.

CANADA: Brookley AFB, Ala.; Great Falls AFB, Mont.; McChord AFB, Wash.; Mitchel AFB, N. Y.; Selfridge AFB, Mich.; Washington National Arpt, D. C.; Westover AFB, Mass.

CANAL ZONE, CENTRAL AMERICA, MEXICO and SOUTH AMERICA: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla.; March AFB, Calif.; Washington National Airport, D. C.

CARIBBEAN: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla.; Washington National Airport, D. C.

ENGLAND, GREENLAND, ICELAND, and NORTH IRELAND: Washington National Airport, D. C.; Westover AFB, Mass.

EUROPEAN THEATER: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla.; Washington National Airport, D. C.; Westover AFB, Mass.

HAWAII: Travis AFB, California.

NOVA SCOTIA and NEWFOUNDLAND: Brookley AFB, Ala.; Mitchel AFB, N. Y.; Selfridge AFB, Mich.; Washington National Airport, D. C.; Westover AFB, Mass.

The classified "Foreign Clearance Information Guide", published by Aeronautical Chart and Information Service and now distributed to all Air Force bases should be consulted prior to departure for foreign clearing station, particularly with regard to diplomatic requirements for country for which clearance is desired, in order that appropriate advance notice of flight may be given and delay at foreign station may be avoided.

CURRENT FEDERAL AIRWAYS MANUALS OF OPERATION: The following publications are now distributed in accordance with AF Regulation 5-12, and supersede listing given in paragraph 5 of this regulation. Base operations officers, weather and communication units should check copies in use to insure that latest issues and all revisions are available. Mailing lists are now maintained in accordance with groupings of material as follows:

GROUP I MATERIAL: II-B. Instructions for the Operation of Communications Facilities, First Edition, January 15, 1950 (This replaces II-B-2, II-B-3, II-B-5, II-B-7, II-B-8 and II-B-11); M-59, November 5, 1949 (Service "B").

GROUP II MATERIAL: Location Identifiers, Fourth Edition, July 1, 1950, with two revisions.

GROUP III MATERIAL: Contractions, Fifth Edition, December 1, 1949.

GROUP IV MATERIAL: Civil Airways Mileage Chart of December 27, 1950.

GROUP V MATERIAL: Teletype Service "A" Manual, September 19, 1950; Teletype Service "C" Manual, January 9, 1951; Teletype Maps: M-11, December 1, 1949, and M-14 April 15, 1950 (Service "A"); M-10, October 1, 1949, and M-13, November 1, 1950 (Service "C"); M-58, August 15, 1950 (Service "A", "C", and "O").

GROUP VI MATERIAL: Teletype Service "O" Manual, May 1, 1950, with Revision 6 (Revisions 1-5 obsolete). Teletype Maps M-89, February 1, 1950 (Service "O") and M-58 (Service "A", "C" and "O").

Requests for distribution should be directed to Commanding Officer, Aeronautical Chart and Information Service, Washington 25, D. C. Attn: Aeronautical Information Division.

USAF POLICY REGARDING USE OF INACTIVE FIELDS: In accordance with directive from Headquarters, USAF, Air Force fields which are on inactive status and are listed in the Directory as "INACT-NO FACS" will in the future be closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16, unless on official business with written orders.

COMPULSORY REPORTING POINTS - VAR RANGE FACILITIES: VAR Facilities designated by CAA and shown on radio facility charts as Compulsory Reporting Points will be applicable to USAF aircraft only if the aircraft is equipped with the necessary instruments and radio frequencies and if a flight plan has been filed with ATC declaring the intention to utilize these facilities. When ATC clearances include instructions using these facilities and the aircraft is not equipped for such use, the pilot should so advise the traffic control agency and request amended traffic control instructions.

UHF CHANNELIZATION: An initial UHF channelization plan has been approved for USAF and USN UHF-equipped aircraft in the U. S. and will be published in subsequent issues of the Radio Facility Charts. UHF frequencies which are being first implemented at USAF stations on a continuing program beginning 1 July 1951 are:

Channel 1	Control tower (military primary)	236.6 mc
" 15	Military Airways	258.20 mc
" 17	GCA	335.80 mc
" 18	GCA	289.40 mc
Guard	Military emergency	243.00 mc

CAA stations, towers and centers are providing service on UHF. Channels used and locations at which services are available will be found in the Air Navigation Radio Aids Section of the Airman's Guide.

CIVIL SPECIAL NOTICES

CIVIL DATA: The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or runway partially unusable because of construction.

Obviously, temporary hazardous conditions should be reported to the aeronautical public at once. The necessity for reporting additional aids or minor changes in existing aids however, isn't nearly as cogent. In other words, a temporarily closed airport is ordinarily of much more importance from a safety viewpoint than is a new airport, and the aeronautical public should be told about it as expeditiously as possible.

Notamizing of advice covering a field unusable because of flood or snow, a runway closed because of construction, or the erection of a pole-line in an approach, doesn't necessitate an engineering background on the part of the reporter. Too, safety frequently necessitates the notamizing of such advice before an official check can be made. On the other hand, advice covering permanent airport data changes, such as a new airport, or a lengthened landing strip, or an additional hangar, obviously doesn't require the same expeditious transmission to the aeronautical public, and the data may be checked from an engineering standpoint and for standardization before being publicized.

SUMMATION: (a) Since the aeronautical public should be immediately advised on hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Development, Attention: W-155, Washington 25, D. C.)

(b) Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate C.A.A. District Airport Engineer for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U.S. Air Force and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thre

DIRECTORY OF AIRPORTS AND AIR NAVIGATION RADIO AIDS NOTAMS: Because of space limitation, the Airport Directory and Air Navigation Radio Aids perforce serve as a notam supplement. Notam data revising a previous Directory or ANRA are indicated by prefixed arrows. The only airport or radio data (other than temporary conditions of short duration) carried in the Notices to Airmen Section are facility coordinates, post-deadline data or data impossible to incorporate in the two above tabulations.

DIRECT COMMUNICATIONS WITH AIR ROUTE TRAFFIC CONTROL CENTERS: The CAA has inaugurated a procedure whereby pilots operating on IFR flight plans may have direct communication with air route traffic controllers at certain control centers. VHF on a simplex basis (call-up and reply on the same frequency) is used. This enables the controller to issue traffic clearances and receive indications of compliance therewith in such a manner that all air traffic is expedited. The center will guard the assigned frequency. However, each specific aircraft, with which the center desires to establish direct communication for control purposes, will receive a clearance through the appropriate CAA, AACS or Air Carrier Communications Station, indicating the time or place the controller desires to communicate directly with the pilot.

The locations at which this direct communications procedure is available are listed in the Air Navigation Radio Aids Section of the Airman's Guide. Each one is listed alphabetically following the tower listing.

VERY HIGH FREQUENCIES FOR PRIVATE PILOTS: Use of very high frequency channels by the majority of private pilots has heretofore been limited to the channels 121.5, 122.1, 122.5 and 122.8 mc. Now, however, any private pilot having need for additional channels may apply to the FCC for use of any of the 40 channels in the 118.1 to 126.7 mc band. To determine their additional requirements, pilots should consult the Airman's Guide (Radio Facilities Section) or contact the nearest CAA regional office for information concerning the channels which have been implemented at the various locations. Of particular interest may be the channel 126.7 mc which was previously limited to use by air carriers for communication with CAA stations (INSACS) but now may be used by any private pilot if required for that purpose.

DVFR FLIGHT PLANS: When an IFR flight plan is canceled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

√AERONAUTICAL ADVISORY STATIONS (FREQUENCY 122.8 mc): This frequency is known in some areas as the "private flyers frequency" and also as "UNICOM". Licenses for ground stations and aircraft are now being issued by the FCC subsequent to receipt of application for license from private pilots and airport operators eligible to use the frequency. Under the FCC rules, private aircraft may use 122.8 mc for communication with aeronautical advisory stations and between private aircraft themselves while in flight. Particular attention is invited to Section 9.1001 which follows:

"9.1001 Eligibility for station license. Authorizations for aeronautical advisory stations will be issued only to the owner or operator of a landing area, not served by an airdrome control station. Only one Aeronautical Advisory station will be authorized at a landing area".

The scope of service to be rendered under FCC rules for the ground station is:

"9.1004 Scope of Service. (a) Communications shall be limited to the necessities of safe and expeditious operation of aircraft. The service shall be advisory in nature, pertaining to the condition of runways, types of fuel available, wind conditions, available weather information or other information necessary for aircraft operations. (b) Aeronautical Advisory stations shall not be used for the control of aircraft." (1-29-52)

USE OF RADIO NAVIGATIONAL FACILITIES REQUIRING FLIGHT CHECK: (Effective February 1, 1952) When a flight check of a radio navigational facility is required, a NOTAM will be issued stating: "Ground checked only, awaiting flight check." When this type of NOTAM is issued, the following will apply:

(1) If the facility is very high frequency, the navigational feature will be shut down and no utilization for navigational purposes will be authorized.

(2) If the facility is low frequency (200 to 400 kcs) non-simultaneous type range, the navigational feature will be shut down and no utilization for navigational purposes will be authorized.

(3) If the facility is low frequency (200 to 400 kcs) simultaneous type range, it may be used as a homing facility only.

(i) In addition, this type of facility may be used as an ADF approach aid by scheduled air carriers, provided that their operations specifications authorize an ADF instrument approach to the airport concerned.

(ii) Irregular air carriers and other operators may use this type of facility as an ADF instrument approach aid if an ADF procedure for the airport concerned is prescribed by the Administrator, or if an approach is conducted using the same course for an ADF track as that apecified in the approved range procedure and with identical altitudes as used in the range approach.

AIR TRAFFIC CLEARANCES: The initial traffic clearance issued to an aircraft prior to departure will normally authorize flight to the point of first intended landing, with instructions to maintain the altitude at which the aircraft enters the next control area. The pilot should request any desired altitude changes en route. Better service can be given the pilot if any altitude change is requested at the time the change is desired. An amendment to the initial clearance may be issued to a flight at any time the air traffic controller deems such action necessary to avoid possible confliction between en route, landing, or departing aircraft. A flight is always cleared to a specific point or location (radio or visual reporting point), defined as a clearance limit. If the assigned altitude is below the minimum for a subsequent portion of the flight and radio failure is experienced, the procedures outlined under TWO-WAY RADIO FAILURE must be followed to insure proper terrain clearance.

Whenever an aircraft has been cleared to a point other than the destination airport it is the responsibility of Air Traffic Control to issue whatever further clearance is appropriate at least five minutes before the aircraft arrives at the clearance limit, unless holding instructions and a time at which the pilot may expect further clearance have been received and acknowledged by the pilot. In the event a pilot arrives at a clearance limit without having received either a clearance beyond or holding instructions at such fix, he should immediately request further clearance and hold at the clearance limit, maintaining the last assigned altitude, until further clearance is received. When a clearance limit is a point other than destination airport, the altitude of the aircraft at this clearance limit will be protected so that separation will exist in the event the aircraft must hold awaiting further clearance. NOTE: The foregoing should not be construed as being related in any way to the procedures which apply when a two-way radio failure occurs.

OMNIRANGE INTERFERENCE: Airmen are requested to assist the CAA and the Radio Technical Commission for Aeronautics in confirming the practicability of operating VOR facilities 100 kc apart with a geographical spacing of only 130 statute miles. The Lynchburg, Va. VOR operates on 116.1 mc and the Washington National Airport TVOR operates on 116.2 mc. If interference is noted between these facilities it is requested that you notify the CAA, Washington 25, D. C., including information as to the altitude and distance at which interference is first noted, the make of omnireceiver in use, which station is causing the interference, and the manner in which the interference manifests itself.

INSAC VHF REPLY TO PRIVATE AIRCRAFT: The new national ground-to-air call-up and reply channel for communication with private aircraft, 122.2 mc was implemented at certain INSACs on August 1, 1951. Eventually, all INSACs will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACs which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current NOTAMS for information on frequencies available at specific station. The frequency upon which the pilot expects reply should be specified in the initial call. When an INSAC is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACs have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

TRANSMISSION OF "V" BY VAR RANGES: Effective on or about November 15, 1951, the letter "V" will be transmitted by all VAR ranges. It will precede the usual location identifier and be separated from it by a short space. It is intented to enable pilots to distinguish instantly between the aural directional signals of VHF ranges, and those of low or medium frequency ranges located in the same general area. It will, for example, guard against the possibility of an error occuring through accidental connection of a pilot's headset to the wrong receiver. The "V" will be transmitted at an appreciably higher rate of speed than the location identifier.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° of azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries."

(1-29-52)

BROADCAST OF AVIATION FORECAST IN NEW YORK AREA: The U. S. Weather Bureau has inaugurated an Aviation Weather Broadcast serving the New York metropolitan area from its Aviation Forecast Center at LaGuardia Field, New York. The program is experimental and provides basic aviation weather forecast service for an area bounded roughly by Boston, Massachusetts; Albany, New York; Harrisburg, Pa. and Washington, D. C. The broadcast is continuous daily between hours of 0600E and 1800E. Station call KW035, frequency 162.55 mc, FM power 250 watts. Receiving units are installed at 15 airports in metropolitan area.

AUTOMATIC VOICE IDENTIFICATION: Voice Identification is currently being added to a total of approximately 67 air navigational facilities (omnirange stations, outer compass locators and fan markers), distributed nationally so as to permit maximum pilot familiarization with this new feature.

Omnirange and outer compass locators where voice identification is already functioning are designated in the ANRA pages by an asterisk (*) in the 'code identification' column. The transmission consists of a voice announcement alternating with the usual Morse Code identification; e. g. 'Long Beach omni (voice) (LGB in Code)

At fan markers, the present tone identification (one dash, two dashes, etc.) is alternated with voice identification (e. g., New Rochelle fan). Since these facilities are not listed in the ANRA pages, a list of fan markers where voice identification has been added follows:

New Rochelle, N. Y.
La Habra, Calif.
Smyrna, Ga.

Pilots are invited to write CAA, Washington 25, D. C., attention W-380, with their comments regarding voice identification, particularly such factors as readability, whether voice and 'code idents' are properly balanced as to loudness, whether any objectionable effect is noted, etc.

✓CIVIL AIRCRAFT USE SURVEY: The Administrator for Civil Aeronautics in planning to meet anticipated air defense requirements is in need of certain information and requests the coorperation of all pilots (other than military or aircarrier) when filing flight plans (IFR, VFR, DVFR) with the CAA facilities listed below. This is not a regulation of the Administrator and is on a voluntary basis only.

1. If you intend to file a flight plan (IFR, VFR, or DVFR) with a CAA facility at any of the locations listed below during the period of February 8-14, 1952, inclusive,

2. And you are piloting an aircraft other than scheduled air carrier or military,

3. Include in your flight plan (Form ACA-398) as the last item, one of the following categories of flight which best describes your purpose in making the flight.

   a) Irregular or corporation flight (IC)
   b) Personal or training flight (PT)
   c) Agriculture or industrial flight (AG)

✓DANGER AREA DESIGNATIONS: The following Danger Area amendment shall be effective as dated, unless otherwise advised:

(1) In Section 608.12, the Ajo, Arizona area published on May 17, 1951 in 16 F. R. 4607, amended on August 23, 1951 in 16 F. R. 8448, and on October 31, 1951 in 16 F. R. 11068, is further amended by changing the "Description by Geographical Coordinates" to read: "Beginning at lat. 32-50-25, long. 112-49-00; SSW to U. S.-Mexican Border at lat. 31-56-00, long. 113-00-00; WNW along U. S.-Mexican border to lat. 32-23-45, long. 114-28-30; due N to lat. 32-30-00; due W to long. 114-31-00; due N to lat. 32-35-00; due E to long. 114-28-30; due N to lat. 32-39-40; easterly to lat. 32-40-45, long. 114-18-20; easterly along the Southern Pacific Railroad and U. S. Highway No. 80 to lat. 32-45-30, long. 113-37-30; easterly to lat. 32-50-25, long. 112-49-00, point of beginning.

(2) In Section 608.12, a Gila Bend, Arizona, area is added to read: Location: GILA BEND (Phoenix Chart); Description: Beginning at lat. 32-38-30, long. 112-18-00; due S to lat. 32-26-40; due W to long. 112-43-30; northerly to lat. 32-49-00, long. 112-39-00; SE to lat. 32-38-30, long. 112-18-00, point of beginning; Altitudes: Surface to unlimited; Time: Continuous; Using Agency: Luke AFB, Phoenix, Arizona.

✓CORRECTION TO AIRMAN'S GUIDE: Correct Airman's Guide, Vol. 6, No. 22, dated January 15, 1952 as follows:

Page 81. Non-standard holding pattern. Change "Columbia rng" to read: "Columbia, South Carolina rng".

✓INSTRUMENT APPROACH PROCEDURES: The standard instrument approach procedure (low-frequency range) for Stuttgart, Ark., Stuttgart Arpt, has been CANCELLED, effective Nov. 1, 1951.

√DANGER AREA VIOLATIONS: It has been reported that increasing numbers of civil and military aircraft have been observed violating the Dahlgren Danger Area established for firing and testing activities of the U. S. Naval Proving Grounds, Dahlgren, Va. This situation continues to endanger lives, aircraft and property, and causes delay to the operations of this activity. Because facilities are not available to detect aircraft in the area to provide safety for violators, pilots are cautioned that this area is extremely hazardous and is becoming increasingly so, both day and night in all types of weather. Pilots should familiarize themselves with the location of this area which lies over protions of Virginia, Maryland and the Potomac River between Civil Airways Amber 7, Green 5, Blue 5b, Red 77 and Red 19. It is shown on the Washington Sectional Chart and described in the Flight Information Manual.

√NON-STANDARD HOLDING PATTERN: Effective immediately the following non-standard holding pattern is established: Forbes AFB LF range (Topeka, Kansas). Direction from holding point - SW; direction of turn - Left on the NW side of the SW crs; time - 2 minutes.

√ON-REQUEST REPORTING POINTS: Effective immediately, the following on-request reporting points are established:

BAIR INTERSECTION - The intersection of the N crs of Kansas City, Mo. ILS lclzr and the E crs of St. Joseph, Mo. LF rng.

BEAUFORT INTERSECTION - The intersection of the SW crs of St. Louis, Mo. ILS lclzr and the NE crs of Vichy, Mo. LF range.

ALTON INTERSECTION - The intersection of the NE crs of St. Louis, Mo. ILS lclzr and the NW crs of Belleville, Ill. (Scott AFB) LF range.

√AERONAUTICAL CHART CORRECTIONS: (1) Correct RF Chart 25 U. S. VOR, dtd Dec. 19, 1951, by changing the identification for Scranton VOR to SCR.

(2) RF chart 26, Dec. 5, 1951. Change mileage from Peabody, Mass. FM to Portland, Me. facility to read 85 miles. RF Chart 16 should also be amended accordingly for the Portland sector.

√CIVIL AIRWAY, CONTROL AREA, CONTROL ZONE AND REPORTING POINT AMENDMENTS: Effective 0001 EST February 19, 1952, unless otherwise advised, civil airways, control areas, control zones and reporting points are amended in whole or in part as follows:

CIVIL AIRWAYS: (1) Red civil airway No. 13 is amended by changing caption to read: (Butler, Pa. to Boston, Mass.) and by adding a first portion to read: "From the Butler, Pa. non-directional rdo bcn to the Philipsburg, Pa. rdo rng stn."

(2) Red civil airway No. 94 (Providence, R. I. to Hyannis, Mass.) is amended by substituting the words "Hyannis, Mass. Arpt" for the words "Hyannis, Mass. non-directional rdo bcn."

CONTROL AREAS: (1) Red civil airway No. 13 is amended by changing caption to read: (Butler, Pa. to Boston, Mass.)

(2) The three-mile radius zone section is amended by deleting the following airport: Willow Grove, Pa. Naval Air Station and by adding the following airport: Manchester, N. H. Grenier Air Force Base.

(3) Syracuse, N. Y. control zone is amended to read: within a 3 mile radius of Clarence E. Hancock Arpt, within 2 miles either side of the Syracuse ILS lclzr crs extending from the lclzr to the outer mrkr and within 2 miles either side of a direct line extending westward from the airport to the Syracuse rdo rng stn.

(4) Willow Grove, Pa. control zone is added to read: Within a 5 mile radius of a point lctd at lat. 40-11-40, long. 75-06-25 and within 2 miles either side of the NE and NW crss of the Willow Grove (Navy) rdo rng extending from the rdo rng stn to points 10 miles NE and NW of the rdo rng stn.

(5) Great Falls, Mont. control zone is added to read: Within a 5 mile radius of the Great Falls AFB, excluding the portion which overlaps the Great Falls Municipal Arpt ctl zone.

(6) Ft. Knox, Ky. control zone is added to read: Within a 5 mile radius of the Godman AFB and within 2 miles either side of a line bearing 350° true extending from the Godman AFB non-directional rdo bcn to a pt 10 mi. N, excluding the portion which overlaps danger areas.

REPORTING POINTS: (1) Amber civil airway No. 1 (U. S. Mexican Border to Nome, Alaska) is amended by adding the following reporting point after the Merced, Calif. (Castle) rdo rng stn: "the intsxn of the E crs of the Stockton, Calif. rdo rng and the SE crs of the Sacramento, Calif. rdo rng".

(2) Blue civil airway No. 70 is amended to read: (Ardmore, Okla. to Tulsa, Okla.) Ardmore, Okla. non-directional rdo bcn.

Effective 0001 EST January 30, 1952, unless otherwise advised, the control areas of Red Airway 83 are amended as follows:

Red civil airway No. 83 (Gila Bend, Ariz. to Rodeo, N. M.) is amended by changing the first portion to read: "from the Gila Bend, Ariz. omnirng stn to the Tucson, Ariz. omnirng stn via the direct en route radials".

WASHINGTON CONTROL ZONE-RADAR DEPARTURE CONTROL-SPECIAL NOTICE: Jan 7, radar departure procedures will be inaugurated for acft departing on IFR flight plans from the Washington Control Zone. Rdo freqs 120.7 mc and 119.7 mc will be utilized for this purpose. In accordance with these radar procedures departing IFR acft will be provided at least 3 mi horizontal separation from all other known IFR traffic unless standard IFR separation exists and will continue to exist. As additional services, in so far as practicable, separation as specified above will be provided, regardless of weather conditions, between acft departing on IFR flight plans and any other traffic observed on the radar scope whose altitude is not known or whose altitude is the same as the altitude of the acft being controlled, and radar traffic advisory info will be supplied to acft departing VFR. Many factors (such as limitations of the radar, volume of traffic, controllers work load, and frequency congestion) may prevent the controller from providing the additional services mentioned above. The controller will have complete discretion in determining whether he is able to provide, or to continue to provide, these additional services in a specific case. The controllers decision against providing, or continuing to provide, these additional services will be dependent entirely upon whether the controller believes he is in a position to provide them. Copies of the detailed radar departure procedures may be obtained from the Washington National Tower or Washington Air Route Traffic Control Center. (1-3)

IMPENDING CHANGES IN AERONAUTICAL DISTANCE AND SPEED UNITS

All CAA air-ground communications within the continental United States and Alaska will change over to the use of nautical miles for horizontal distance and visibility and knots for horizontal speed on July 1, 1952. These changes are necessary in order to conform to international practices.

Basically, a nautical mile is the length of a minute of latitude at sea level, or the length of a minute of longitude at sea level at the equator. This distance is 6,080.20 feet, as compared to 5,280 feet for the common or statute mile. Since the ratio 6,080/5,280 is equal to 1.15, and the ratio 5,280/6,080 is equal to .87, it is apparent that the number of statute miles is 115% of the number of nautical miles, or the number of nautical miles is 87% of the number of statute miles. Furthermore, if the fraction 6,080/5,280 is reduced to lowest terms, we obtain 38/33, indicating that 38 statute miles are equal to 33 nautical miles.

Furthermore, practically all air navigational computers provide quick and easy conversions of nautical miles to statute miles, or vice versa, so no difficulties should be experienced by anyone who will attempt to inform himself as to the relationship of the units and with at least one of the various methods of conversion. Attention is specifically called to the fact that the knot is a unit of speed and not a unit of distance, being equal to nautical miles per hour.

Conversion Tables for Statute and Nautical Miles
(To the nearest hundredth)

1 nautical mile = 6,080.20 ft. 1 statute mile = 5,280.00 ft.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

AIR NAVIGATION RADIO AIDS

INSAC = Interstate Airway Communications Station (CAA).

VHF OMNI-RANGES: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

NOTE: See OMNIRANGE USE page 79.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSAC. (C) The station identification is monitored continuously by the communicator at the associated INSAC. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSAC. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored solely through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSAC, and located too distant from INSAC to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

LEGEND

(A) = Air Force facility. (N) = Navy facility. (P) = Private facility
(g) = Tower equipped with 121.9 or 121.7 mc transmitter for control of ground traffic. (7-19) = Hours of operation, i.e., 0700-1900
(U) = Unmonitored, but usable for navigation (3) = Monitoring category
(B) = Blue Hemisphere; (Y) = Yellow hemisphere
→ New or revised data
✓ New facilities or name changes, see page 20
* = Automatic voice identification

NOTE: Letters between range courses are quadrant identifiers, e.g., "90 YN 180" indicates the quadrant between the two courses is a yellow N quadrant. The letter immediately following a range course indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N" aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . Approach Control Tower, CAA (transmits on voice channel of associated L/MF range or ILS in addition to frequencies listed)
B. . . . Scheduled Broadcast Station (broadcasts weather at 15 & 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . Control Tower, CAA
CA. . . Control Tower, Air Force
CI. . . Control Tower (City, County, Private, etc.)
CN. . . Control Tower, Navy
D. . . . Distantly controlled
FM. . . VHF fan marker (100 watts)
GCA. . Ground Controlled approach system
H. . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . Instrument Landing System (voice on localizer channel)
J. . . . L/MF (200-415 kc) voice facility on other than range frequency
LFM. . VHF fan marker, low powered (5 watts)
LMM. . Compass locator station when combined with middle marker of ILS
LOM. . Compass locator when installed at outer marker site or within 5.5 miles of MM
LVOR. . Low power VOR (with standby equipment)
MH. . Non-directional radio beacon (homing) power less than 50 watts
ML. . Range (loop radiators), power less than 50 watts
MM. .. VHF middle marker
MOR... Low frequency omni-directional range
MRA. . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL .. Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . VHF outer marker
P. . . . Point-to-Point radio
RA. . . Range (adcock, vertical radiators), power 150 watts or more
RL. . . Range (loop radiators), power 150 watts or more
S. . . . Simultaneous (range signals and voice) type of transmitter
T. . . . Teletype
TVOR. Low power VOR (no standby equipment) located on airport
TX. . . Principal teletype
V . . . . Additional VHF voice feature on other than range frequency
VAR. . Visual-aural VHF range
VOR. . Omni VHF omni-directional range (omni-range)
W . . . Without voice facilities on range frequency
Z . . . . VHF station location marker at a range station

FREQUENCY LEGEND

V = 135.9 and 135.0 mc transmitted.
# = Guards same VHF frequencies station transmits except 122.2 mc and 135.0 mc.
(1) = 3105, 4495 kc guarded
(2) = 3105, 4495 kc; 122.5 mc. This group of frequencies is group generally guarded by C.A.A. towers.
(3) = 3105, 4495 kc; 122.1, 126.7, 135.9 mc. This group of frequencies is group generally guarded by INSACS.
e.g., (3)-135.9, 122.1 guards every frequency in group (3) except 135.9 and 122.1
= Transmitting frequencies/ guarding frequencies.

NOTES

1. Range courses are magnetic in-bearings.
2. All C.A.A. MH facilities operate continuously unless cited as follows: (on req)
3. All C.A.A. ranges operate continuously. Those which are not manned continuously are cited in the class column with hours of operation in parentheses, e.g., (6-24)
4. When a VOR or VAR is controlled by an associated LF range, because of space limitation, DTV is not included in the VHF range class.

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

RADAR AVAILABLE : How and Where

PAR = PRECISION APPROACH RADAR. ASR = AIRPORT SURVEILLANCE RADAR.
GCA = GROUND CONTROLLED APPROACH - MILITARY EQUIVALENT OF COMBINED ASR AND PAR EQUIPMENT

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway. The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for this type of approach are at least as high as, and in some instances higher than, the regular circling minimums listed in the Flight Information Manual for the airport.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums, associated runways and GCA procedures are listed in the Flight Information Manual.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.

Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.

Emergency: When receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at the pilot's discretion.

After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible.

Civil minimums at military installations estabilshed by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums.

Navy units are prepared to transmit on HF from 2000 to 18,100 kc and receive any frequency from 1500 to 9050 kc to aid any plane in emergency.

Alt MSL=Min. alt. over airport.

(D) = Day. (N) = Night. ➔=New or revised data. ✓= New facilities or name changes.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

CITY AND AIRPORT NAME

(AF) Airport name followed by city name in parenthesis (With AF in Type Column) - field owned or leased in whole by U.S. Air Force.

(AF) City and Airport Name (with C,I,M,MG or P in Type Column) - a civil airport with Air Force operations, reserve training, or other such acitvity thereon.

NOTE: Similar combinations of above two citations of A,N,CG, and NG indicate the same is applicable for Army, Navy, Coast Guard, and National Guard fields respectively.

(P) City and Airport Name - Civil Airport covered by an agreement between municipality and U.S. Government which permits use by transient military aircraft.

(PC) Same legal status as (P), but closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16.

* City, Site No., and Airway abbreviation - CAA intermediate field. Municipal airports with lights maintained by the CAA are listed similarly except there is no prefixed star.

NOTES:

1. MILITARY FIELDS ARE OPEN TO CIVIL AIRCRAFT ONLY BY PRIOR PERMISSION OF THE C.O. THEREOF. ALL AIRPORTS with C,I,M, or MG in type column are open to civil fliers.

2. USAF aircraft are permitted to use only those fields prefixed with an AF,A,N,NG,CG,P,PC or *.

3. When city and airport names are identical, the airport name is omitted to conserve space.

TYPE

AF	-Air Force	C	-Commercial	MG	-Misc. Govt
A	-Army (May also be used by Army Nat'l Guard)	CG	-Coast Guard	N	-Navy
		I	-Intermediate	NG	-Air Nat'l Guard
		M	-Municipal	P	-Private

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.

If orientation features are less than 1/2 mile from the field, distance is not specified

ELEVATION

Obviously, the effective length of a runway decreases with elevation above sea level. The C.A.A. formula for elevation correction is that a sea level runway length requirement must be increased 7% per 1000 feet of elevation above sea level. High temperatures also play an important role in reducing the effective length of runways.

NUMBER OF RUNWAYS

No differentiation is made between runways and strips as far as number of landing areas in field is concerned.

DIRECTORY OF AIRPORTS
LEGEND

LONGEST RUNWAY
FACILITIES

In this column are included the length and surfacing of the longest runway, the lighting and servicing facilities, and weather reports available.

RUNWAYS

The length of the longest paved runway or non-paved strip is stated in hundreds of feet. If the length is not prefixed, the surface is sod, clay, gravel, etc.

h - runway is paved (concrete, asphalt or similar type of paving)

aw - allway field

(26) - runway or strip length not verified by C.A.A.

LIGHTS

B: Rotating Light (Rotating beacon) (Green and white, split-beam and other types) Omission of B indicates rotating light is either not available or not operating standard hours (sunset-sunrise).

NOTE: Code lights are not codified, and are carried in Remarks Column.

L: Field Lighting

- L - by itself indicates temporary lighting, such as flares, smudge pots, lanterns.
- 1 - Portable lights (Electrical)
- 2 - Boundary
- 3 - Runway floods
- 4 - Runway or Strip
- 5 - Instrument approach (neon)
- 6 - High intensity runway
- 7 - High intensity instrument approach

* An asterisk preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise by request (circling the field or radio call).

Because the obstructions on virtually all lighted fields are obstruction lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage
S2: Storage, minor aircraft repairs
S3: Storage, minor aircraft, and minor engine repairs
S4: Storage, major aircraft, and minor engine repairs
S5: Storage, major aircraft, and major engine repairs

NOTE: Any S combination without parenthesis indicates only full-time day attendant. Fields having lighting facilities may have 24 hours attendant available.

Any S combination in parenthesis-part time or irregular attendant.

WEATHER

W: Weather reports available from Weather Bureau or C.A.A. communications station on field.

UNICOM

U: Unicom (Aero Advisory station transmitting and receiving on 122.8 mc).

FUEL OCTANE

Civil Fuel:

F1: 80 oct., at least
F2: 87 oct., and lower
F3: 91 oct., and lower
F4: 100 oct., and lower

NOTE: If only one octane available, this octane cited, and not coded.

FUEL OCTANE (cont)

Any F combination without parenthesis indicates full time day attendant, in parenthesis part-time or irregular attendant.

Air Force and Navy Fuel

A+: 115/145 oct.
A : 100/130 oct.
B : 91/96 oct.
C: 73/80 oct.
J: Jet Fuel

REMARKS

(a) "INACTIVE" indicates usable civil field, but not being operated, at last inspection. Caution advised.

(b) "CLOSED" indicates closed to all traffic except in emergency.

(c) "OFL BUS ONLY" indicates closed to all transient military aircraft except on official business or in emergency. U.S. Aircraft require written orders. "AF OFL BUS ONLY" or "NAVY OFL BUS ONLY" indicates applicability of restriction only to Service indicated.

(c) "INACT - NO FACS" indicates AF airfields used exclusively by the USAF or municipal fields used jointly by the USAF and civil interest at which both USAF and civil interest are inactive; these will be available to military aircraft at the discretion of the Commanding Officer of the organization to which aircraft are assigned.

(e) "CIVIL FACS ONLY" indicates municipal fields under joint control or ownership of the USAF and/or Navy and civil interests at which no USAF or Navy facilities are available. Such fields may be used by military aircraft; however, only commercial service is available.

(f) "LIMITED USE" indicates some special restriction on use of field which will be listed in Notices to Airmen section of Airman's Guide.

(g) "ABANDONED" indicates reverted to non-airport usage such as farming or grazing.

(h) "REPORTED ABANDONED" indicates an airport reported abandoned but not verified as such by C.A.A.

(i) "FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

(j) "Blkd" indicates approaches where glide angle to runway is 3:1 or less.

(k) "Rgt tfc N" indicates right turns should be made on landings and take-offs to N.

(l) "A,B" indicates Air Force or Navy fuel. See Fuel Octane column.

NOTES

1. → New or revised data.
2. SCHEDULED AIRLINE STOP airport names are capitalized.
3. PRIVATE AIRPORTS: Usually unattended, offer no public service and solicit no public patronage. Such fields are listed primarily because of their possible utility as emergency landing areas. Use of these fields is at the risk of the user. No "S" or "F" combination is ever assigned these fields.
4. OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, for example, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.
5. NEW AIRPORTS: At the end of each state, under this heading will be found, out of alphabetical alignment, all the new airports tabulated after the type for that state had been originally set up.

NOTICES TO AIRMEN

SPECIAL NOTICES

NAVY SPECIAL NOTICES

NAVY DATA. In accordance with Hydrographic Office Memorandum for Aviators, No. 17, September 17, 1948, before any changes or modifications of any aid to air navigation, such as realignment of radio ranges, modified instrument approach procedures, relocation of fan markers, etc., can be published by the Hydrographic Office, the Command requesting the change must first obtain approval from the Office of Chief of Naval Operations, Navy Department, Washington 25, D. C. When an approved change or modification has been made to any aid to air navigation, the Command shall immediately notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C.

All Naval Air Stations and Air Facilities are directed to notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C., direct, of all contemplated or immediate changes in their field facilities, operation rules, air-ground communication facilities, GCA, etc., and other factors affecting safe operation of aircraft which do not necessitate approval from CNO. This may be done by letter, speedletter, or dispatch, as applicable.

In accordance with Chief of Naval Operations Aviation Circular Letter 19-49 March 2, 1949, approval for the closing of any Navy or Marine Corps Air Station or Air Facility to transient military aircraft for a period in excess of ten days must be obtained from the Chief of Naval Operations.

Commanding Officers of Naval and Marine Corps aviation activities are directed to review all information published by the Hydrographic Office, U. S. Air Force, Civil Aeronautics Administration, and Coast and Geodetic Survey on facilities under their command and immediately forward any corrections or approved amendments direct to the publishing agency. A copy of the corrections or amendments to information published by other agencies should be forwarded to the Hydrographic Office. The charts and publications issued by the above-mentioned agencies must be currently maintained in order that all aviators can be kept informed of changes to airfields, seaplane anchorages, navigational aids, and other factors affecting the safe operation of aircraft.

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA: Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to: Commanding Officer, USAF Aeronautical Chart and Information Service, Washington 25, D. C.; Attn: Aeronautical Information Division.

Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over ten days should be forwarded through channels to Headquarters, U. S. Air Force. Restrictions in Air National Guard fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration by Headquarters, USAF ACIS.

In connection with the above, the attention of all base operations officers is invited to A.F. Regulation 55-12 of July 1, 1949, subject, "Notices to Airmen", A. F. Regulation 5-16 of February 20, 1948, subject, "Responsibilities for Flight Publications", and to A. F. Regulation 60-23 of September 23, 1947, subject, "Restrictions on Landing at Army Airfields".

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of Air Force Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the nearest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant to itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

**In 4 channel equipment (ARC-5 and SCR-522) 132.3 mc or 142.02 mc may be substituted on Channel C and D in accordance with operational requirements.

SPECIAL CHARTS OF ATOMIC ENERGY AIRSPACE RESERVATIONS: The Atomic Energy Commission has issued a special chart depicting airspace reservations in the United States. Copies of this chart are being supplied each Air Force Base, AF Reserve Unit, National Guard Unit and other activities on the same mailing list basis as used for Airman's Guide. Operations officers should prominently display this chart and assure that pilots contemplating flight adjacent to these areas are briefed upon their existence, location and restricted status.

✓ Indicates new or revised Special Notices

USAF POLICY REGARDING USE OF INACTIVE FIELDS: In accordance with directive from Headquarters, USAF, Air Force fields which are on inactive status and are listed in the Directory as "INACT-NO FACS" will in the future be closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16, unless on official business with written orders.

AIR FORCE FOREIGN CLEARING STATIONS: Under the authority of Air Force Regulation 60-8 of July 6, 1949, U. S. Air Force aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated:

AFRICA and AZORES: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; Westover AFB, Mass.

ALASKA: Great Falls AFB, Mont.; McChord AFB, Wash.; Travis AFB, Calif.

BERMUDA: Brookley AFB, Ala.; MacDill AFB, Fla.; Mitchel AFB, N. Y.; Washington National Airport, D. C.; Travis AFB, Calif.; Westover AFB, Mass.

CANADA: Brookley AFB, Ala.; Great Falls AFB, Mont.; McChord AFB, Wash.; Mitchel AFB, N. Y.; Selfridge AFB, Mich.; Washington National Arpt, D. C.; Westover AFB, Mass.

CANAL ZONE, CENTRAL AMERICA, MEXICO and SOUTH AMERICA: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla.; March AFB, Calif.; Washington National Airport, D. C.

CARIBBEAN: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla.; Washington National Airport, D. C.

ENGLAND, GREENLAND, ICELAND, and NORTH IRELAND: Washington National Airport, D. C.; Westover AFB, Mass.

EUROPEAN THEATER: Brookley AFB, Ala., Kelly AFB, Texas; MacDill AFB, Fla., Washington National Airport, D. C.; Westover AFB, Mass.

HAWAII: Travis AFB, California.

NOVA SCOTIA and NEWFOUNDLAND: Brookley AFB, Ala.; Mitchel AFB, N. Y.; Selfridge AFB, Mich.; Washington National Airport, D. C.; Westover AFB, Mass.

The classified "Foreign Clearance Information Guide", published by Aeronautical Chart and Information Service and now distributed to all Air Force bases should be consulted prior to departure for foreign clearing station, particularly with regard to diplomatic requirements for country for which clearance is desired, in order that appropriate advance notice of flight may be given and delay at foreign station may be avoided.

CURRENT FEDERAL AIRWAYS MANUALS OF OPERATION: The following publications are now distributed in accordance with AF Regulation 5-12, and supersede listing given in paragraph 5 of this regulation. Base operations officers, weather and communication units should check copies in use to insure that latest issues and all revisions are available. Mailing lists are now maintained in accordance with groupings of material as follows:

GROUP I MATERIAL: II-B. Instructions for the Operation of Communications Facilities, First Edition, January 15, 1950 (This replaces II-B-2, II-B-3, II-B-5, II-B-7, II-B-8 and II-B-11); M-59, November 5, 1949 (Service "B").

GROUP II MATERIAL: Location Identifiers, Fourth Edition, July 1, 1950, with two revisions.

GROUP III MATERIAL: Contractions, Fifth Edition, December 1, 1949.

GROUP IV MATERIAL: Civil Airways Mileage Chart of December 27, 1950.

GROUP V MATERIAL: Teletype Service "A" Manual, September 19, 1950; Teletype Service "C" Manual, January 9, 1951; Teletype Maps: M-11, December 1, 1949, and M-14 April 15, 1950 (Service "A"); M-10, October 1, 1949, and M-13, November 1, 1950 (Service "C"); M-58, August 15, 1950 (Service "A", "C", and "O").

GROUP VI MATERIAL: Teletype Service "O" Manual, May 1, 1950, with Revision 6 (Revisions 1-5 obsolete). Teletype Maps M-89, February 1, 1950 (Service "O") and M-58 (Service "A", "C" and "O").

Requests for distribution should be directed to Commanding Officer, Aeronautical Chart and Information Service, Washington 25, D. C. Attn: Aeronautical Information Division.

COMPULSORY REPORTING POINTS - VAR RANGE FACILITIES: VAR Facilities designated by CAA and shown on radio facility charts as Compulsory Reporting Points will be applicable to USAF aircraft only if the aircraft is equipped with the necessary instruments and radio frequencies and if a flight plan has been filed with ATC declaring the intention to utilize these facilities. When ATC clearances include instructions using these facilities and the aircraft is not equipped for such use, the pilot should so advise the traffic control agency and request amended traffic control instructions.

UHF CHANNELIZATION: An initial UHF channelization plan has been approved for USAF and USN UHF-equipped aircraft in the U. S. and will be published in subsequent issues of the Radio Facility Charts. UHF frequencies which are being first implemented at USAF stations on a continuing program beginning 1 July 1951 are:

Channel 1	Control tower (military primary)	236.6 mc
" 15	Military Airways	258.20 mc
" 17	GCA	335.80 mc
" 18	GCA	289.40 mc
Guard	Military emergency	243.00 mc

CAA stations, towers and centers are providing service on UHF. Channels used and locations at which services are available will be found in the Air Navigation Radio Aids Section of the Airman's Guide.

CIVIL SPECIAL NOTICES

CIVIL DATA: The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or runway partially unusable because of construction.

Obviously, temporary hazardous conditions should be reported to the aeronautical public at once. The necessity for reporting additional aids or minor changes in existing aids however, isn't nearly as cogent. In other words, a temporarily closed airport is ordinarily of much more importance from a safety viewpoint than is a new airport, and the aeronautical public should be told about it as expeditiously as possible.

Notamizing of advice covering a field unusable because of flood or snow, a runway closed because of construction, or the erection of a pole-line in an approach, doesn't necessitate an engineering background on the part of the reporter. Too, safety frequently necessitates the notamizing of such advice before an official check can be made. On the other hand, advice covering permanent airport data changes, such as a new airport, or a lengthened landing strip, or an additional hangar, obviously doesn't require the same expeditious transmission to the aeronautical public, and the data may be checked from an engineering standpoint and for standardization before being publicized.

SUMMATION: (a) Since the aeronautical public should be immediately advised on hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Development, Attention: W-155, Washington 25, D. C.)

(b) Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate C.A.A. District Airport Engineer for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U.S. Air Force and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thre

DIRECTORY OF AIRPORTS AND AIR NAVIGATION RADIO AIDS NOTAMS: Because of space limitation, the Airport Directory and Air Navigation Radio Aids perforce serve as a notam supplement. Notam data revising a previous Directory or ANRA are indicated by prefixed arrows. The only airport or radio data (other than temporary conditions of short duration) carried in the Notices to Airmen Section are facility coordinates, post-deadline data or data impossible to incorporate in the two above tabulations.

DIRECT COMMUNICATIONS WITH AIR ROUTE TRAFFIC CONTROL CENTERS: The CAA has inaugurated a procedure whereby pilots operating on IFR flight plans may have direct communication with air route traffic controllers at certain control centers. VHF on a simplex basis (call-up and reply on the same frequency) is used. This enables the controller to issue traffic clearances and receive indications of compliance therewith in such a manner that all air traffic is expedited. The center will guard the assigned frequency. However, each specific aircraft, with which the center desires to establish direct communication for control purposes, will receive a clearance through the appropriate CAA, AACS or Air Carrier Communications Station, indicating the time or place the controller desires to communicate directly with the pilot.

The locations at which this direct communications procedure is available are listed in the Air Navigation Radio Aids Section of the Airman's Guide. Each one is listed alphabetically following the tower listing.

VERY HIGH FREQUENCIES FOR PRIVATE PILOTS: Use of very high frequency channels by the majority of private pilots has heretofore been limited to the channels 121.5, 122.1, 122.5 and 122.8 mc. Now, however, any private pilot having need for additional channels may apply to the FCC for use of any of the 40 channels in the 118.1 to 126.7 mc band. To determine their additional requirements, pilots should consult the Airman's Guide (Radio Facilities Section) or contact the nearest CAA regional office for information concerning the channels which have been implemented at the various locations. Of particular interest may be the channel 126.7 mc which was previously limited to use by air carriers for communication with CAA stations (INSACS) but now may be used by any private pilot if required for that purpose.

DVFR FLIGHT PLANS: When an IFR flight plan is canceled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

AIR TRAFFIC CLEARANCES: The initial traffic clearance issued to an aircraft prior to departure will normally authorize flight to the point of first intended landing, with instructions to maintain the altitude at which the aircraft enters the next control area. The pilot should request any desired altitude changes en route. Better service can be given the pilot if any altitude change is requested at the time the change is desired. An amendment to the initial clearance may be issued to a flight at any time the air traffic controller deems such action necessary to avoid possible confliction between en route, landing, or departing aircraft. A flight is always cleared to a specific point or location (radio or visual reporting point), defined as a clearance limit. If the assigned altitude is below the minimum for a subsequent portion of the flight and radio failure is experienced, the procedures outlined under TWO-WAY RADIO FAILURE must be followed to insure proper terrain clearance.

Whenever an aircraft has been cleared to a point other than the destination airport it is the responsibility of Air Traffic Control to issue whatever further clearance is appropriate at least five minutes before the aircraft arrives at the clearance limit, unless holding instructions and a time at which the pilot may expect further clearance have been received and acknowledged by the pilot. In the event a pilot arrives at a clearance limit without having received either a clearance beyond or holding instructions at such fix, he should immediately request further clearance and hold at the clearance limit, maintaining the last assigned altitude, until further clearance is received. When a clearance limit is a point other than destination airport, the altitude of the aircraft at this clearance limit will be protected so that separation will exist in the event the aircraft must hold awaiting further clearance.

NOTE: The foregoing should not be construed as being related in any way to the procedures which apply when a two-way radio failure occurs.

OMNIRANGE INTERFERENCE: Airmen are requested to assist the CAA and the Radio Technical Commission for Aeronautics in confirming the practicability of operating VOR facilities 100 kc apart with a geographical spacing of only 130 statute miles. The Lynchburg, Va. VOR operates on 116.1 mc and the Washington National Airport TVOR operates on 116.2 mc. If interference is noted between these facilities it is requested that you notify the CAA, Washington 25, D. C., including information as to the altitude and distance at which interference is first noted, the make of omnireceiver in use, which station is causing the interference, and the manner in which the interference manifests itself.

INSAC VHF REPLY TO PRIVATE AIRCRAFT: The new national ground-to-air call-up and reply channel for communication with private aircraft, 122.2 mc, was implemented at certain INSACs on August 1, 1951. Eventually, all INSACs will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACs which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current NOTAMS for information on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call. When an INSAC is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACs have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occurring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciably higher rate of speed than the location identifier.

USE OF OMNIRANGE: The effectvieness of the omnirng (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirng over 360° of azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

AUTOMATIC VOICE IDENTIFICATION: Voice Identification is currently being added to a total of approximately 67 air navigational facilities (omnirange stations, outer compass locators and fan markers), distributed nationally so as to permit maximum pilot familiarization with this new feature.

Omnirange and outer compass locators where voice identification is already functioning are designated in the ANRA pages by an asterisk (*) in the 'code identification' column. The transmission consists of a voice announcement alternating with the usual Morse Code identification; e. g. ' Long Beach omni (voice) .-.. --. -... (LGB in code) '

At fan markers, the present tone identification (one dash, two dashes, etc.) is alternated with voice identification (e. g., New Rochelle fan). Since these facilities are not listed in the ANRA pages, a list of fan markers where voice identification has been added follows:

New Rochelle, N. Y.
La Habra, Calif.
Smyrna, Ga.

Pilots are invited to write CAA, Washington 25, D. C., attention W-380, with their com-

ments regarding voice identification, particularly such factors as readability, whether voice and 'code idents' are properly balanced as to loudness, whether any objectionable effect is noted, etc.

BROADCAST OF AVIATION FORECAST IN NEW YORK AREA: The U. S. Weather Bureau has inaugurated an Aviation Weather Broadcast serving the New York metropolitan area from its Aviation Forecast Center at LaGuardia Field, New York. The program is experimental and provides basic aviation weather forecast service for an area bounded roughly by Boston, Massachusetts; Albany, New York; Harrisburg, Pa. and Washington, D. C. The broadcast is continuous daily between hours of 0600E and 1800E. Station call KW085, frequency 162.55 mc, FM power 250 watts. Receiving units are installed at 15 airports in metropolitan area.

√AIRSPACE RESERVATION NORTH ATLANTIC AREA: An airspace reservation has been established for naval maneuvers from 1300Z Feb. 27, 1952 to 2400Z March 5, 1952 in an area bounded by a line extending through the following points. 40N 73W, Bermuda rng stn, 38N 75.15W thence along the coastline to 39.55N 74W thence to point of origin, from the surface up to and including 3000' under IFR conditions except (a) within 150 mile radius of Bermuda; (b) within domestic civil airways. Participating aircraft will display running lights at all times during the hours of darkness. Participating aircraft required to proceed above the airspace reservation during IFR conditions and will obtain prior approval from the appropriate OAC and/or ATC center. Non participating aircraft encountering emergency conditions that require descent into the above reservation will notify the appropriate OAC and/or ATC center and broadcast reason for descent on 135.9 and/or 121.5 mc and/or the appropriate ICAO route frequency. Participating shore based aircraft will contact local ATC centers for necessary clearances for flight between terminals and the airspace reservation during IFR conditions. Aircraft will use altimeter settings 29.92.

√USE OF FAN MARKERS AT INTERSECTIONS: It has been reported that some pilots when cleared to an intersection formed by two range courses, and where a fan marker is also situated, merely fly one of the range courses and wait for the coded identification signals of the fan marker rather than check both range courses forming the intersectionto determine their position.

Inasmuch as these intersections are often used as clearance limits for air traffic separation purposes, the inherent hazards of such a practice become immediately apparent. It could happen that the fan marker or the aircraft marker receiver could fail without knowledge of the pilot or traffic controllers. The flight would then overfly the intersection and could possibly jeopardize other air traffic beyond that clearance limit.

It is most important, therefore, that all pilots be alert to this hazard and it is urged that they check both courses of radio ranges forming any intersections to which they are cleared, rather than rely on the fan marker reception alone.

√DANGER AREA DESIGNATIONS: The following Danger Area amendments shall be effective as dated, unless otherwise advised:

AMENDMENT NO. 13 to Part 608 - DANGER AREAS
(February 8, 1952)

(1) In Section 608.18, a Lake George, Fla. area is added to read: Location: LAKE GEORGE (Orlando Chart); Description: N boundary: lat. 29-23-00; E boundary: long. 81-30-00; S boundary: lat. 29-12-30; W boundary: long. 81-40-00; Altitudes: Surface to 50,000' Time: Continuous; Using Agency: Naval Air Base Command, 6th Naval Dist., Jacksonville, Fla.

(2) In Section 608.18, an Oak Hill, Fla. area is added to read: Location: OAK HILL (Orlando Chart); Description: Beginning at lat. 29-00-00, long. 80-47-45; southeasterly paralleling the shoreline at a distance of 3 nautical miles to lat. 28-50-00, long. 80-41-35; due W to a point 1 nautical mile E of Amber Civil Airway No. 7 at long. 80-50-00; northwesterly 1 nautical mile E of ard parallel to the E boundary of Amber Civil Airway No. 7 to lat. 29-00-00; due E to lat. 29-00-00, long. 80-47-45, point of beginning; Altitudes: Surface to 15,000'; Time: Daylgt hrs only; Using Agency: 6th Naval District, Naval Air Station, Jacksonville, Fla.

AMENDMENT NO. 14 to PART 608 - DANGER AREAS
(February 21, 1952)

(1) In Section 608.17, the Bethany Beach, Delaware, area, published on January 18, 1951 in 16. F. R. 455, and amended on June 19, 1951 in 16 F. R. 5834, is further amended by changing the "Description by Geographical Coordinates" column to read: Beginning at lat. 38-36-50, long. 74-59-50; southerly paralleling the shoreline at a distance of 3 nautical miles to lat. 38-20-45, long. 75-00-20; W to lat. 38-21-00, long. 75-05-00; due N to lat. 38-31-00; NE to lat. 38-36-50, long. 74-59-50, point of beginning.

(2) In Section 608.48, the Ft. Jackson, S. C. area, published on July 16, 1949 in 14 F. R. 4295, and amended on May 2, 1950 in 15 F. R. 2463, is further amended by changing the "Description by Geographical Coordinates" column to read: "Beginning at lat. 34-03-51, long. 80-42-12; southerly to lat. 34-01-40, long. 80-42-15; W to lat. 34-01-50, long. 80-55-15; NW to lat. 34-02-31, long. 80-56-02; NE to lat. 34-04-45, long. 80-53-02; ENE tolat. 34-06-19, long. 80-48-47; ESE to lat. 34-05-58, long. 80-46-05; SE to lat. 34-03-51, long. 80-42-12, point of beginning.

(3) In Section 608.51, the Corpus Christi, Texas area, published on July 16, 1949 in 14 F. R. 4295, amended on May 10, 1951 in 16 F. R. 4311, and on January 24, 1952 in 17 F. R. 715 is further amended by changing the "Description by Georgraphical Coordinates" column to read: "Beginning at lat. 27-49-20, long. 97-00-00; southerly, 3 nautical miles from and parallel to the shoreline to lat. 26-15-00, long. 97-07-20; due W to long. 97-26-00; NNW to lat. 26-30-30, long. 97-31-30; ENE to lat. 26-31-30, long. 97-27-30; counterclockwise along the arc of a circle 3 miles in radius, centered at Port Mansfield Airport (lat. 26-33-35, long. 97-25-40) to lat. 26-33-45, long. 97-28-30; WSW to lat. 26-33-00, long. 97-32-20; NNW to lat. 27-17-30, long. 97-48-30; WSW to the E edge of Amber Civil Airway No. 4 at lat. 27-16-30, long. 97-51-15; northerly along the E edge of Amber Civil Airway No. 4 to lat. 27-29-00, long. 97-55-15; ENE to lat. 27-30-00, long. 97-52-00; counterclockwise along the arc of a circle 2 miles in radius, centered at lat. 27-31-30, long. 97-52-45 to lat. 27-32-40, long. 97-51-00; NNW to a point on the SE edge of Blue Civil Airway No. 30 at lat. 27-33-40, long. 97-51-45; NE and E along the SE edge of Blue Civil Airway No. 30 and the S edge of Green Civil Airway No. 6 to lat. 27-43-20, long. 97-33-30; counterclockwise along the arc of a circle 3 miles in radius, centered at Cuddihy Field (lat. 27-43-15, long. 97-30-30) to lat. 27-40-30, long. 97-29-40; NE to lat. 27-47-00, long. 97-20-00; ENE to lat. 27-49-30, long. 97-07-30; counterclockwise along the arc of a circle 3 miles in radius, centered at Port Aransas Airport (Lat. 27-49-45, long. 97-04-30) to lat. 27-49-30, long. 97-01-30; easterly to lat. 27-49-20, long. 97-00-00, point of beginning.

√CORRECTION TO FLIGHT INFORMATION MANUAL: Correct Flight Information Manual, Vol. 5, No. 2, dated June 15, 1951 as follows:

Page 9. Change WB and CAA telephone numbers at Yuma, Ariz. to 3-3861 and 3-4501 respectively.

√AERONAUTICAL CHART CORRECTIONS: (1) Correct RF Chart No. 11 by showing mileage between Frankfort reporting point and Huron rng stn on Amber Airway No. 4 as 34 miles.

(2) Correct RF Chart No. 6 by showing hours of operation of Duluth, Minn. tower as 24 hours.

√CORRECTION TO AIRMAN'S GUIDE: Correct Airman's Guide, Vol. 6, No. 23, dated January 29, 1952, by adding the following heading to the Danger Area amendment on Page 81: AMENDMENT No. 12 to Part 608 - DANGER AREAS - (January 30, 1952).

AIRSPACE RESERVATION NORTH ATLANTIC AND CARIBBEAN

The following airspace reservation has been established for Naval maneuvers from 1300Z, February 27, 1952 to 2400Z, March 19, 1952 in an area bounded by a line extending through the following points: 38° 00'N - 75° 15'W; BDA Range Station; 13° 20'N - 62° 10'W; 11° 20'N - 63° 30'W; 11° 20'N - 67° 00'W; 13° 20'N - 68° 00'W; 13° 20'N - 71° 00'W; 12° 30'N - 71° 00'W; 12° 30'N - 72° 30'W; 11° 30'N - 75° 00' W; 11° 00'N - 75° 30'W; 11° 00'N - 82° 40'W; 15° 00'N - 83° 00' W; 20° 00'N - 86° 00'W; 22° 00' N - 86° 00'W; 26° 00'N - 83° 30'W; 24° 00'N - 83° 10'W; 24° 00'N - 80° 25'W; 24° 40'N - 79° 00'W; thence along the Nassau and Miami Oceanic boundaries to 28° 25'N - 79° 00'W; 28° 25'N - 78° 00'W; 31° 30'N - 78° 00'W; 34° 20'N - 74° 00'W; 36° 00'N - 76° 00'W; thence along the coastline to point of origin; from the surface up to and including 6,000 feet under IFR conditions, except; (a) within 150 mile radius of Bermuda; (b) within 100 mile radius of San Jaun; (c) within 25 mile radius of a point established by the following coordinates - 29° 25'N - 74° 40'W; (d) within 25 mile radius of Princess Juliana; (e) within the Port Au Prince and Ciudad Trujillo FIR areas; (f) within 50 miles of the coast of Jamaica, except for that area east of a north-south line drawn through the eastern tip of Jamaica; (g) within 70 mile radius of Havana; (h) within 25 mile radius of Norfolk; (i) all operations within the Nassau Control Area will be conducted in accordance with VFR (j) when necessary, participating aircraft may enter all of the above mentioned areas, except the Port Au Prince and Ciudad Trujillo FIR areas, during IFR conditions and the hours of darkness by obtaining prior approval from the appropriate OAC and/or ATC Center.

Operations will be conducted all all altitudes under VFR conditions throughout the above reservation, except that during the hours of darkness, aircraft operating above 6,000 feet will be under radar control and surveillance at all times.

Participating aircraft will display running lights at all times during the hours of darkness.

Participating aircraft required to proceed above the airspace reservation during IFR conditions will obtain prior approval from the appropriate OAC and/or ATC Center. Such aircraft will guard 135.9 mc and/or 121.5 mc; and/or the appropriate ICAO route frequency for the area concerned. Non-participating aircraft encountering emergency conditions that require descent into the above airspace reservation will notify the appropriate OAC and/or ATC Center, and broadcast position and reason for descent on 135.9 mc and/or 121.5 mc and/or the appropriate ICAO route frequency. Participating shorebased aircraft will make arrangements with local ATC Centers for necessary clearances for flight between terminals and the airspace reservation.

Aircraft operating within the above reservation will use altimeter setting 29.92.

Rdo freqs 120.7 mc and 119.7 mc will be utilized for this purpose. In accordance with these radar procedures departing IFR acft will be provided at least 3 mi horizontal separation from all other known IFR traffic unless standard IFR separation exists and will continue to exist. As additional services, in so far as practicable, separation as specified above will be provided, regardless of weather conditions, between acft departing on IFR flight plans and any other traffic observed on the radar scope whose altitude is not known or whose altitude is the same as the altitude of the acft being controlled and, radar traffic advisory info will be supplied to acft departing VFR. Many factors (such as limitations of the radar, volume of traffic, controllers work load, and frequency congestion) may prevent the controller from providing the additional services mentioned above. The controller will have complete discretion in determining whether he is able to provide, or to continue to provide, these additional services in a specific case. The controllers decision against providing, or continuing to provide, these additional services will be dependent entirely upon whether the controller believes he is in a position to provide them. Copies of the detailed radar departure procedures may be obtained from the Washington National Tower or Washington Air Route Traffic Control Center. (1-3)

SPECIAL DANGER CHART
USAF TEXAS MANEUVERS

"EXERCISE LONG HORN": Effective 10 March 1952 through 15 April 1952, inclusive, the United States Air Force will conduct intensive maneuvers in the general area of Adamsville, Texas. These maneuvers will involve the flight of a large number of aircraft operating during both VFR and IFR weather conditions within the areas shown, which have been set aside for the use of maneuver aircraft. Cross-country flights of non-maneuver aircraft will avoid areas. Flight of non-maneuver military and civil aircraft within the areas during both VFR and IFR conditions will be permitted as indicated by the legend.

LEGEND

AREA A - Danger Area Surface to 10,000 ft. above MSL
No flights permitted.

AREA BC - Danger Area Surface to 4,000 ft. above MSL
No flights permitted.

AREA D - Danger Area 2,500 to 10,000 ft. above MSL
Flights permitted only with IFR Flight Plans approved prior to take-off by Joint Operations Center. Local CAA ATC or USAF Flight Service will process clearance requests.

AREA E - Danger Area Surface to Unlimited Altitude
No flights permitted. (Arrangements have been made for ingress and egress of essential military flights to and from Gray AFB.)

The Controlling Agency is "JOINT OPERATIONS CENTER" (TACC), North Fort Hood, Texas.

Note: Under extenuating circumstances, civil flights may enter the above areas, except Area E, by receiving prior approval from the controlling agency.

Temporary Control Areas - (between Shreveport, La., and Maneuver Area)
Extensive Airlift Operations will be conducted along the routes indicated on the insert map, which will be designated as Control Areas during the period 10 March 1952 through 15 April 1952. Civil Air Regulations appropriate to flight within Control Areas will apply.

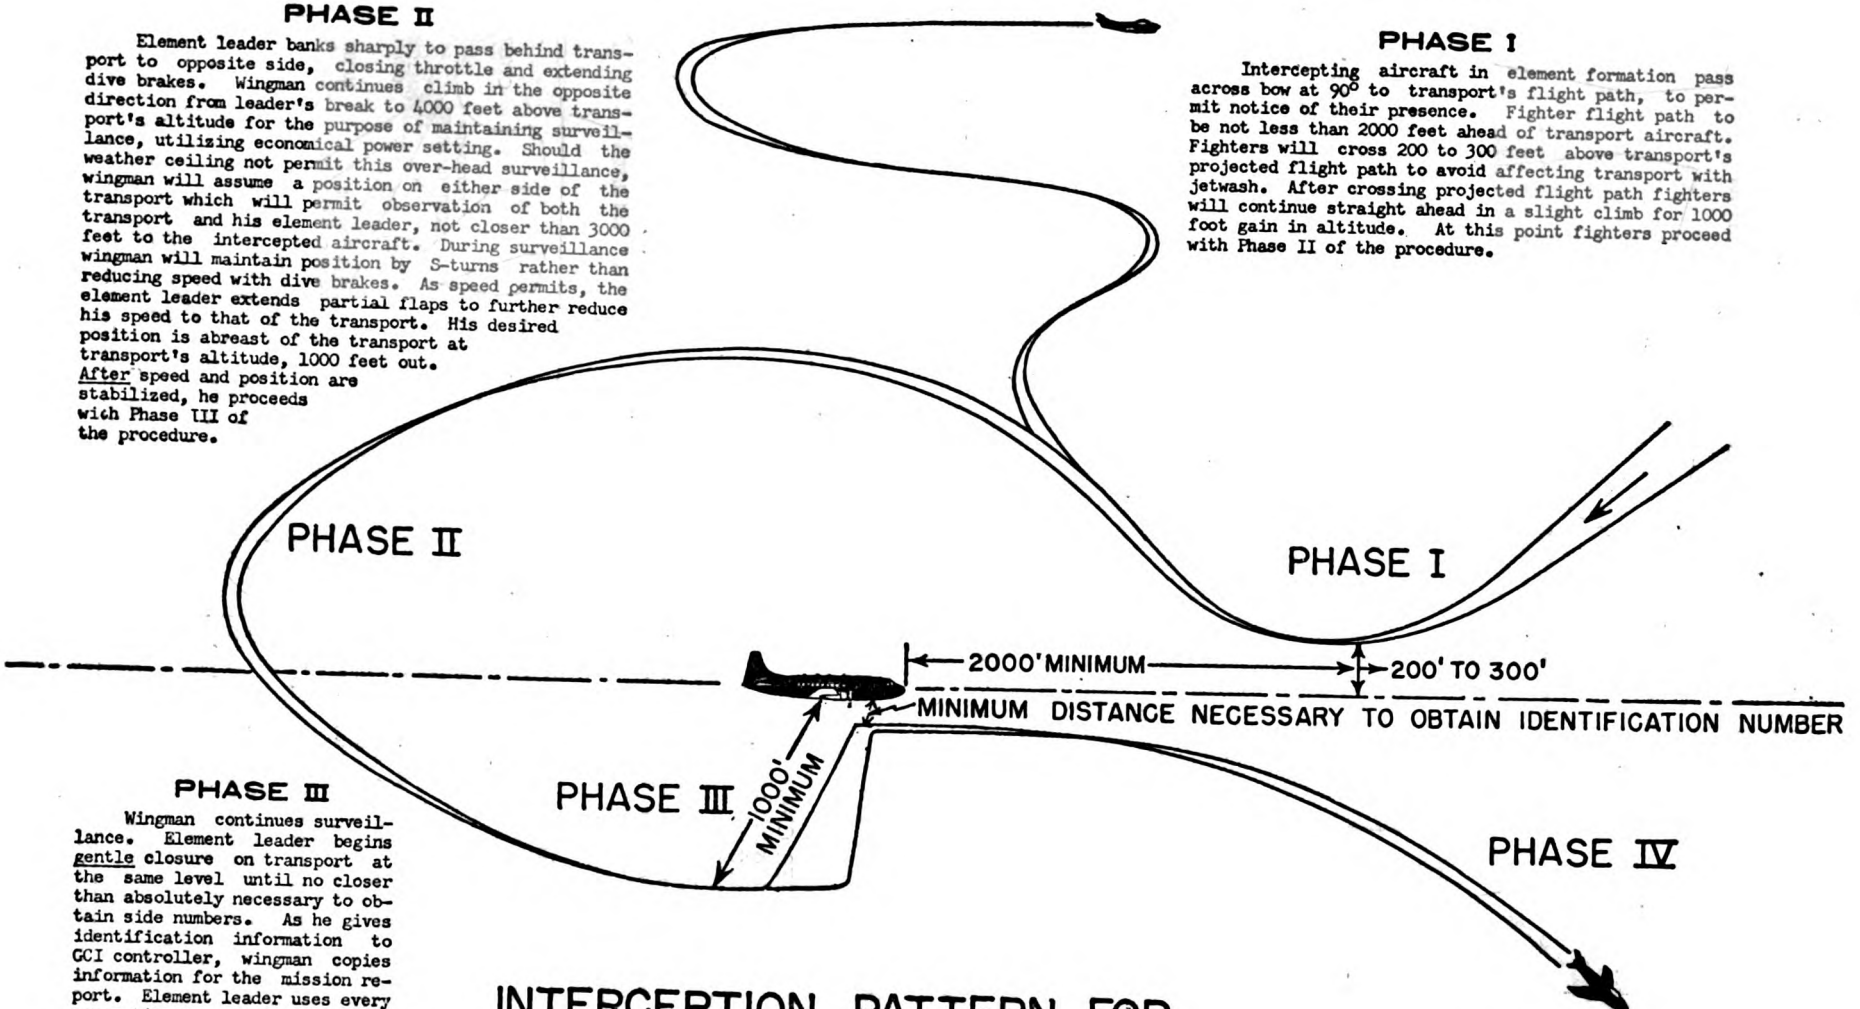
THE AIR FORCE ADVISES THAT WHEN AN INTERCEPTION IS NECESSARY THE FOLLOWING PATTERN WILL BE USED

PHASE II

Element leader banks sharply to pass behind transport to opposite side, closing throttle and extending dive brakes. Wingman continues climb in the opposite direction from leader's break to 4000 feet above transport's altitude for the purpose of maintaining surveillance, utilizing economical power setting. Should the weather ceiling not permit this over-head surveillance, wingman will assume a position on either side of the transport which will permit observation of both the transport and his element leader, not closer than 3000 feet to the intercepted aircraft. During surveillance wingman will maintain position by S-turns rather than reducing speed with dive brakes. As speed permits, the element leader extends partial flaps to further reduce his speed to that of the transport. His desired position is abreast of the transport at transport's altitude, 1000 feet out. After speed and position are stabilized, he proceeds with Phase III of the procedure.

PHASE I

Intercepting aircraft in element formation pass across bow at 90° to transport's flight path, to permit notice of their presence. Fighter flight path to be not less than 2000 feet ahead of transport aircraft. Fighters will cross 200 to 300 feet above transport's projected flight path to avoid affecting transport with jetwash. After crossing projected flight path fighters will continue straight ahead in a slight climb for 1000 foot gain in altitude. At this point fighters proceed with Phase II of the procedure.



PHASE III

Wingman continues surveillance. Element leader begins gentle closure on transport at the same level until no closer than absolutely necessary to obtain side numbers. As he gives identification information to GCI controller, wingman copies information for the mission report. Element leader uses every precaution to avoid startling transport crew or passengers. Upon completion of identification, the fighters withdraw from transport vicinity as outlined in Phase IV.

PHASE IV

Element leader breaks gently away from transport, in shallow dive to pick up speed. Wingman stays well clear of transport and proceeds to join leader.

AIR NAVIGATION RADIO AIDS

INSAC = Interstate Airway Communications Station (CAA).

VHF OMNI-RANGES: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

NOTE: See OMNIRANGE USE page 75!

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSAC. (C) The station identification is monitored continuously by the communicator at the associated INSAC. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSAC. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored solely through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSAC, and located too distant from INSAC to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

LEGEND

(A) = Air Force facility. (N) = Navy facility. (P) = Private facility
(g) = Tower equipped with 121.9 or 121.7 mc transmitter for control of ground traffic. (7-19) = Hours of operation, i.e., 0700-1900
(U) = Unmonitored, but usable for navigation (3) = Monitoring category
(B) = Blue Hemisphere; (Y) = Yellow hemisphere
➔ New or revised data
✓ New facilities or name changes, see page 20
* = Automatic voice identification

NOTE: Letters between range courses are quadrant identifiers, e.g., "90 YN 180" indicates the quadrant between the two courses is a yellow N quadrant. The letter immediately following a range course indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N" aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . Approach Control Tower, CAA (transmits on voice channel of associated L/MF range or ILS in addition to frequencies listed)
B. . . . Scheduled Broadcast Station (broadcasts weather at 15 & 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . Control Tower, CAA
CA. . . Control Tower, Air Force
CI. . . Control Tower (City, County, Private, etc.)
CN. . . .Control Tower, Navy
D. . . . Distantly controlled
FM. . . VHF fan marker (100 watts)
GCA. . Ground Controlled approach system
H. . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . Instrument Landing System (voice on localizer channel)
J. . . . L/MF (200-415 kc) voice facility on other than range frequency
LFM. . VHF fan marker, low powered (5 watts)
LMM. . Compass locator station when combined with middle marker of ILS
LOM. . Compass locator when installed at outer marker site or within 5.5 miles of MM
LVOR. . Low power VOR (with standby equipment)
MH. . Non-directional radio beacon (homing) power less than 50 watts
ML. . Range (loop radiators), power less than 50 watts
MM. .. VHF middle marker
MOR... Low frequency omni-directional range
MRA. . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL .. Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . VHF outer marker
P. . . . Point-to-Point radio
RA. . . Range (adcock, vertical radiators), power 150 watts or more
RL. . . Range (loop radiators), power 150 watts or more
S. . . . Simultaneous (range signals and voice) type of transmitter
T. . . . Teletype
TVOR. Low power VOR (no standby equipment) located on airport
TX. . . Principal teletype
V . . . . Additional VHF voice feature on other than range frequency
VAR. . Visual-aural VHF range
VOR. . Omni VHF omni-directional range (omni-range)
W . . . Without voice facilities on range frequency
Z . . . . VHF station location marker at a range station

# = Guards same VHF frequencies station transmits except 122.2 mc and 135.0 mc.
(1) = 3105, 4495 kc guarded
(2) = 3105, 4495 kc; 122.5 mc. This group of frequencies is group generally guarded by C.A.A. towers.
(3) = 3105, 4495 kc; 122.1, 126.7, 135.9 mc. This group of frequencies is group generally guarded by INSACS.
e.g., (3)-135.9, 122.1 guards every frequency in group (3) except 135.9 and 122.1
/ = Transmitting frequencies/ guarding frequencies.

NOTES

1. Range courses are magnetic in-bearings.
2. All C.A.A. MH facilities operate continuously unless cited as follows: (on req)
3. All C.A.A. ranges operate continuously. Those which are not manned continuously are cited in the class column with hours of operation in parentheses, e.g., (6-24)
4. When a VOR or VAR is controlled by an associated LF range, because of space limitation, DTV is not included in the VHF range class.

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

RADAR AVAILABLE : How and Where

PAR = PRECISION APPROACH RADAR. ASR = AIRPORT SURVEILLANCE RADAR.
GCA = GROUND CONTROLLED APPROACH - MILITARY EQUIVALENT OF COMBINED ASR AND PAR EQUIPMENT

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway. The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for this type of approach are at least as high as, and in some instances higher than, the regular circling minimums listed in the Flight Information Manual for the airport.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums, associated runways and GCA procedures are listed in the Flight Information Manual.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.

Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.

Emergency: When receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at the pilot's discretion.

After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible.

Civil minimums at military installations estabilshed by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums.

Navy units are prepared to transmit on HF from 2000 to 18,100 kc and receive any frequency from 1500 to 9050 kc to aid any plane in emergency.

Alt MSL=Min. alt. over airport.
(D) = Day. (N) = Night. ➤=New or revised data. ✓= New facilities or name changes.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

CITY AND AIRPORT NAME

(AF) Airport name followed by city name in parenthesis (With AF in Type Column) - field owned or leased in whole by U.S. Air Force.

(AF) City and Airport Name (with C,I,M,MG or P in Type Column) - a civil airport with Air Force operations, reserve training, or other such acitvity thereon.

NOTE: Similar combinations of above two citations of A,N,CG, and NG indicate the same is applicable for Army, Navy, Coast Guard, and National Guard fields respectively.

(P) City and Airport Name - Civil Airport covered by an agreement between municipality and U.S. Government which permits use by transient military aircraft.

(PC) Same legal status as (P), but closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16.

* City, Site No., and Airway abbreviation - CAA intermediate field. Municipal airports with lights maintained by the CAA are listed similarly except there is no prefixed star.

NOTES:

1. MILITARY FIELDS ARE OPEN TO CIVIL AIRCRAFT ONLY BY PRIOR PERMISSION OF THE C.O. THEREOF. ALL AIRPORTS with C,I,M, or MG in type column are open to civil fliers.

2. USAF aircraft are permitted to use only those fields prefixed with an AF,A,N,NG,CG,P,PC or *.

3. When city and airport names are identical, the airport name is omitted to conserve space.

TYPE

AF	-Air Force	C	-Commercial	MG	-Misc. Govt
A	-Army (May also be used by Army Nat'l Guard)	CG	-Coast Guard	N	-Navy
		I	-Intermediate	NG	-Air Nat'l Guard
		M	-Municipal	P	-Private

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.

If orientation features are less than 1/2 mile from the field, distance is not specified

ELEVATION

Obviously, the effective length of a runway decreases with elevation above sea level. The C.A.A. formula for elevation correction is that a sea level runway length requirement must be increased 7% per 1000 feet of elevation above sea level. High temperatures also play an important role in reducing the effective length of runways.

NUMBER OF RUNWAYS

No differentiation is made between runways and strips as far as number of landing areas in field is concerned.

DIRECTORY OF AIRPORTS
LEGEND

LONGEST RUNWAY
FACILITIES

In this column are included the length and surfacing of the longest runway, the lighting and servicing facilities, and weather reports available.

RUNWAYS

The length of the longest paved runway or non-paved strip is stated in hundreds of feet. If the length is not prefixed, the surface is sod, clay, gravel, etc.

h - runway is paved (concrete, asphalt or similar type of paving)

aw - allway field

(26) - runway or strip length not verified by C.A.A.

LIGHTS

B: Rotating Light (Rotating beacon) (Green and white, split-beam and other types)
Omission of B indicates rotating light is either not available or not operating standard hours (sunset-sunrise).

NOTE: Code lights are not codified, and are carried in Remarks Column.

L: Field Lighting

- L - by itself indicates temporary lighting, such as flares, smudge pots, lanterns.
- 1 - Portable lights (Electrical)
- 2 - Boundary
- 3 - Runway floods
- 4 - Runway or Strip
- 5 - Instrument approach (neon)
- 6 - High intensity runway
- 7 - High intensity instrument approach

* An asterisk preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise by request (circling the field or radio call).

Because the obstructions on virtually all lighted fields are obstruction lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage
S2: Storage, minor aircraft repairs
S3: Storage, minor aircraft, and minor engine repairs
S4: Storage, major aircraft, and minor engine repairs
S5: Storage, major aircraft, and major engine repairs

NOTE: Any S combination without parenthesis indicates only full-time day attendant. Fields having lighting facilities may have 24 hours attendant available.

Any S combination in parenthesis-part time or irregular attendant.

WEATHER

W: Weather reports available from Weather Bureau or C.A.A. communications station on field.

UNICOM

U: Unicom (Aero Advisory station transmitting and receiving on 122.8 mc).

FUEL OCTANE

Civil Fuel:

F1: 80 oct., at least
F2: 87 oct., and lower
F3: 91 oct., and lower
F4: 100 oct., and lower

NOTE: If only one octane available, this octane cited, and not coded.

FUEL OCTANE (cont)

Any F combination without parenthesis indicates full time day attendant, in parenthesis part-time or irregular attendant.

Air Force and Navy Fuel

A+: 115/145 oct.
A : 100/130 oct.
B : 91/96 oct.
C: 73/80 oct.
J: Jet Fuel

REMARKS

(a) "INACTIVE" indicates usable civil field, but not being operated, at last inspection. Caution advised.

(b) "CLOSED" indicates closed to all traffic except in emergency.

(c) "OFL BUS ONLY" indicates closed to all transient military aircraft except on official business or in emergency. U.S. Aircraft require written orders. "AF OFL BUS ONLY" or "NAVY OFL BUS ONLY" indicates applicability of restriction only to Service indicated.

(c) "INACT - NO FACS" indicates AF airfields used exclusively by the USAF or municipal fields used jointly by the USAF and civil interest at which both USAF and civil interest are inactive; these will be available to military aircraft at the discretion of the Commanding Officer of the organization to which aircraft are assigned.

(e) "CIVIL FACS ONLY" indicates municipal fields under joint control or ownership of the USAF and/or Navy and civil interests at which no USAF or Navy facilities are available. Such fields may be used by military aircraft; however, only commercial service is available.

(f) "LIMITED USE" indicates some special restriction on use of field which will be listed in Notices to Airmen section of Airman's Guide.

(g) "ABANDONED" indicates reverted to non-airport usage such as farming or grazing.

(h) "REPORTED ABANDONED" indicates an airport reported abandoned but not verified as such by C.A.A.

(i) "FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

(j) "Blkd" indicates approaches where glide angle to runway is 3:1 or less.

(k) "Rgt tfc N" indicates right turns should be made on landings and take-offs to N.

(l) "A,B" indicates Air Force or Navy fuel. See Fuel Octane column.

NOTES

1. -►- New or revised data.
2. SCHEDULED AIRLINE STOP airport names are capitalized.
3. PRIVATE AIRPORTS: Usually unattended, offer no public service and solicit no public patronage. Such fields are listed primarily because of their possible utility as emergency landing areas. Use of these fields is at the risk of the user. No "S" or "F" combination is ever assigned these fields.
4. OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, for example, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.
5. NEW AIRPORTS: At the end of each state, under this heading will be found, out of alphabetical alignment, all the new airports tabulated after the type for that state had been originally set up.

NOTICES TO AIRMEN

SPECIAL NOTICES

NAVY SPECIAL NOTICES

NAVY DATA: In accordance with Hydrographic Office Memorandum for Aviators, No. 17, September 17, 1948, before any changes or modifications of any aid to air navigation, such as realignment of radio ranges, modified instrument approach procedures, relocation of fan markers, etc., can be published by the Hydrographic Office, the Command requesting the change must first obtain approval from the Office of Chief of Naval Operations, Navy Department, Washington 25, D. C. When an approved change or modification has been made to any aid to air navigation, the Command shall immediately notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C.

All Naval Air Stations and Air Facilities are directed to notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C., direct, of all contemplated or immediate changes in their field facilities, operation rules, air-ground communication facilities, GCA, etc., and other factors affecting safe operation of aircraft which do not necessitate approval from CNO. This may be done by letter, speedletter, or dispatch, as applicable.

In accordance with Chief of Naval Operations Aviation Circular Letter 19-49 March 2, 1949, approval for the closing of any Navy or Marine Corps Air Station or Air Facility to transient military aircraft for a period in excess of ten days must be obtained from the Chief of Naval Operations.

Commanding Officers of Naval and Marine Corps aviation activities are directed to review all information published by the Hydrographic Office, U. S. Air Force, Civil Aeronautics Administration, and Coast and Geodetic Survey on facilities under their command and immediately forward any corrections or approved amendments direct to the publishing agency. A copy of the corrections or amendments to information published by other agencies should be forwarded to the Hydrographic Office. The charts and publications issued by the above-mentioned agencies must be currently maintained in order that all aviators can be kept informed of changes to airfields, seaplane anchorages, navigational aids, and other factors affecting the safe operation of aircraft.

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA: Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to: Commanding Officer, USAF Aeronautical Chart and Information Service, Washington 25, D. C.; Attn: Aeronautical Information Division.

Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over ten days should be forwarded through channels to Headquarters, U. S. Air Force. Restrictions in Air National Guard fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration by Headquarters, USAF ACIS.

In connection with the above, the attention of all base operations officers is invited to A.F. Regulation 55-12 of July 1, 1949, subject, "Notices to Airmen", A. F. Regulation 5-16 of February 20, 1948, subject, "Responsibilities for Flight Publications", and to A. F. Regulation 60-23 of September 23, 1947, subject, "Restrictions on Landing at Army Airfields".

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of Air Force Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the nearest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant to itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

SPECIAL CHARTS OF ATOMIC ENERGY AIRSPACE RESERVATIONS: The Atomic Energy Commission has issued a special chart depicting airspace reservations in the United States. Copies of this chart are being supplied each Air Force Base, AF Reserve Unit, National Guard Unit and other activities on the same mailing list basis as used for Airman's Guide. Operations officers should prominently display this chart and assure that pilots contemplating flight adjacent to these areas are briefed upon their existence, location and restricted status.

Guard	Military Emergency	243.00

COMPULSORY REPORTING POINTS - VAR RANGE FACILITIES: VAR Facilities designated by CAA and shown on radio facility charts as Compulsory Reporting Points will be applicable to USAF aircraft only if the aircraft is equipped with the necessary instruments and radio frequencies and if a flight plan has been filed with ATC declaring the intention to utilize these facilities. When ATC clearances include instructions using these facilities and the aircraft is not equipped for such use, the pilot should so advise the traffic control agency and request amended traffic control instructions.

USAF POLICY REGARDING USE OF INACTIVE FIELDS: In accordance with directive from Headquarters, USAF, Air Force fields which are on inactive status and are listed in the Directory as "INACT-NO FACS" will in the future be closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16, unless on official business with written orders.

AIR FORCE FOREIGN CLEARING STATIONS: Under the authority of Air Force Regulation 60-8 of July 6, 1949, U. S. Air Force aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated:

AFRICA and AZORES: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; Westover AFB, Mass.

ALASKA: Great Falls AFB, Mont.; McChord AFB, Wash.; Travis AFB, Calif.

BERMUDA: Brookley AFB, Ala.; MacDill AFB, Fla.; Mitchel AFB, N. Y.; Washington National Airport, D. C.; Travis AFB, Calif.; Westover AFB, Mass.

CANADA: Brookley AFB, Ala.; Great Falls AFB, Mont.; McChord AFB, Wash.; Mitchel AFB, N. Y.; Selfridge AFB, Mich.; Washington National Arpt, D. C.; Westover AFB, Mass.

CANAL ZONE, CENTRAL AMERICA, MEXICO and SOUTH AMERICA: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla.; March AFB, Calif.; Washington National Airport, D. C.

CARIBBEAN: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla.; Washington National Airport, D. C.

ENGLAND, GREENLAND, ICELAND, and NORTH IRELAND: Washington National Airport, D. C.; Westover AFB, Mass.

EUROPEAN THEATER: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla. Washington National Airport, D. C.; Westover AFB, Mass.

HAWAII: Travis AFB, California.

NOVA SCOTIA and NEWFOUNDLAND: Brookley AFB, Ala.; Mitchel AFB, N. Y.; Selfridge AFB, Mich.; Washington National Airport, D. C.; Westover AFB, Mass.

The classified "Foreign Clearance Information Guide", published by Aeronautical Chart and Information Service and now distributed to all Air Force bases should be consulted prior to departure for foreign clearing station, particularly with regard to diplomatic requirements for country for which clearance is desired, in order that appropriate advance notice of flight may be given and delay at foreign station may be avoided.

CURRENT FEDERAL AIRWAYS MANUALS OF OPERATION: The following publications are now distributed in accordance with AF Regulation 5-12, and supersede listing given in paragraph 5 of this regulation. Base operations officers, weather and communication units should check copies in use to insure that latest issues and all revisions are available. Mailing lists are now maintained in accordance with groupings of material as follows:

GROUP I MATERIAL: II-B. Instructions for the Operation of Communications Facilities, First Edition, January 15, 1950 (This replaces II-B-2, II-B-3, II-B-5, II-B-7, II-B-8 and II-B-11); M-59, November 5, 1949 (Service "B").

GROUP II MATERIAL: Location Identifiers, Fourth Edition, July 1, 1950, with two revisions.

GROUP III MATERIAL: Contractions, Fifth Edition, December 1, 1949.

GROUP IV MATERIAL: Civil Airways Mileage Chart of December 27, 1950.

GROUP V MATERIAL: Teletype Service "A" Manual, September 19, 1950; Teletype Service "C" Manual, January 9, 1951; Teletype Maps: M-11, December 1, 1949, and M-14 April 15, 1950 (Service "A"); M-10, October 1, 1949, and M-13, November 1, 1950 (Service "C"); M-58, August 15, 1950 (Service "A", "C", and "O").

GROUP VI MATERIAL: Teletype Service "O" Manual, May 1, 1950, with Revision 6 (Revisions 1-5 obsolete). Teletype Maps M-89, February 1, 1950 (Service "O") and M-58 (Service "A", "C" and "O").

Requests for distribution should be directed to Commanding Officer, Aeronautical Chart and Information Service, Washington 25, D. C. Attn: Aeronautical Information Division.

CHANGES FOR PILOT'S HANDBOOK (EAST) U. S.: AL 193, dated September 17, 1951. Mitchel AFB, Hempstead, N. Y. Change missed approach to: Immediate climbing rgt turn to 1500' and return to HEM rng stn.

CIVIL SPECIAL NOTICES

CIVIL DATA: The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Obviously, temporary hazardous conditions should be reported to the aeronautical public at once. The necessity for reporting additional aids or minor changes in existing aids, however, isn't nearly as cogent. In other words, a temporarily closed airport is ordinarily of much more importance from a safety viewpoint than is a new airport, and the aeronautical public should be told about it as expeditiously as possible.

Notamizing of advice covering a field unusable because of flood or snow, a runway closed because of construction, or the erection of a pole-line in an approach, doesn't necessitate an engineering background on the part of the reporter. Too, safety frequently necessitates the notamizing of such advice before an official check can be made. On the other hand, advice covering permanent airport data changes, such as a new airport, or a lengthened landing strip, or an additional hangar, obviously doesn't require the same expeditious transmission to the aeronautical public, and the data may be checked from an engineering standpoint and for standardization before being publicized.

SUMMATION: (a) Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Development, Attention: W-455, CAA, Washington 25, D. C.)

(b) Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate C.A.A. District Airport Engineer for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

DIRECTORY OF AIRPORTS AND AIR NAVIGATION RADIO AIDS NOTAMS: Because of space limitation, the Airport Directory and Air Navigation Radio Aids perforce serve as a notam supplement. Notam data revising a previous Directory or ANRA are indicated by prefixed arrows. The only airport or radio data (other than temporary conditions of short duration) carried in the Notices to Airmen Section are facility coordinates, post-deadline data or data impossible to incorporate in the two above tabulations.

DIRECT COMMUNICATIONS WITH AIR ROUTE TRAFFIC CONTROL CENTERS: The CAA has inaugurated a procedure whereby pilots operating on IFR flight plans may have direct communication with air route traffic controllers at certain control centers. VHF on a simplex basis (call-up and reply on the same frequency) is used. This enables the controller to issue traffic clearances and receive indications of compliance therewith in such a manner that all air traffic is expedited. The center will guard the assigned frequency. However, each specific aircraft, with which the center desires to establish direct communication for control purposes, will receive a clearance through the appropriate CAA, AACS or Air Carrier Communications Station, indicating the time or place the controller desires to communicate directly with the pilot.

The locations at which this direct communications procedure is available are listed in the Air Navigation Radio Aids Section of the Airman's Guide. Each one is listed alphabetically following the tower listing.

OMNIRANGE INTERFERENCE: Airmen are requested to assist the CAA and the Radio Technical Commission for Aeronautics in confirming the practicability of operating VOR facilities 100 kc apart with a geographical spacing of only 130 statute miles. The Lynchburg, Va. VOR operates on 116.1 mc and the Washington National Airport TVOR operates on 116.2 mc. If interference is noted between these facilities it is requested that you notify the CAA, Washington 25, D. C., including information as to the altitude and distance at which interference is first noted, the make of omnireceiver in use, which station is causing the interference, and the manner in which the interference manifests itself.

INSAC VHF REPLY TO PRIVATE AIRCRAFT: The new national ground-to-air call-up and reply channel for communication with private aircraft, 122.2 mc, was implemented at certain INSACs on August 1, 1951. Eventually, all INSACs will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACs which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current NOTAMS for information on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call. When an INSAC is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACs have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occurring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciably higher rate of speed than the location identifier.

USE OF OMNIRANGE: The effectvieness of the omnirng (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirng over 360° of azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

AUTOMATIC VOICE IDENTIFICATION: Voice Identification is currently being added to a total of approximately 67 air navigational facilities (omnirange stations, outer compass locators and fan markers), distributed nationally so as to permit maximum pilot familiarization with this new feature.

Omnirange and outer compass locators where voice identification is already functioning are designated in the ANRA pages by an asterisk (*) in the 'code identification' column. The transmission consists of a voice announcement alternating with the usual Morse Code identification; e. g. ' Long Beach omni .-.. --. -... '
(voice) (LGB in code)

At fan markers, the present tone identification (one dash, two dashes, etc.) is alternated with voice identification (e. g., New Rochelle fan). Since these facilities are not listed in the ANRA pages, a list of fan markers where voice identification has been added follows:

New Rochelle, N. Y.
La Habra, Calif.
Smyrna, Ga.

Pilots are invited to write CAA, Washington 25, D. C., attention W-380, with their com-

ments regarding voice identification, particularly such factors as readability, whether voice and 'code idents' are properly balanced as to loudness, whether any objectionable effect is noted, etc.

BROADCAST OF AVIATION FORECAST IN NEW YORK AREA: The U. S. Weather Bureau has inaugurated an Aviation Weather Broadcast serving the New York metropolitan area from its Aviation Forecast Center at LaGuardia Field, New York. The program is experimental and provides basic aviation weather forecast service for an area bounded roughly by Boston, Massachusetts; Albany, New York; Harrisburg, Pa. and Washington, D. C. The broadcast is continuous daily between hours of 0600E and 1800E. Station call KW085, frequency 162.55 mc, FM power 250 watts. Receiving units are installed at 15 airports in metropolitan area.

AIRSPACE RESERVATION NORTH ATLANTIC AREA: An airspace reservation has been established for naval maneuvers from 1300Z Feb. 27, 1952 to 2400Z March 5, 1952 in an area bounded by a line extending through the following points: 40N 73W, Bermuda rng stn, 38N 75.15W thence along the coastline to 39.55N 74W thence to point of origin, from the surface up to and including 3000' under IFR conditions except (a) within 150 mile radius of Bermuda; (b) within domestic civil airways. Participating aircraft will display running lights at all times during the hours of darkness. Participating aircraft required to proceed above the airspace reservation during IFR conditions and will obtain prior approval from the appropriate OAC and/or ATC center. Non participating aircraft encountering emergency conditions that require descent into the above reservation will notify the appropriate OAC and/or ATC center and broadcast reason for descent on 135.9 and/or 121.5 mc and/or the appropriate ICAO route frequency. Participating shore based aircraft will contact local ATC centers for necessary clearances for flight between terminals and the airspace reservation during IFR conditions. Aircraft will use altimeter settings 29.92.

USE OF FAN MARKERS AT INTERSECTIONS: It has been reported that some pilots when cleared to an intersection formed by two range courses, and where a fan marker is also situated, merely fly one of the range courses and wait for the coded identification signals of the fan marker rather than check both range courses forming the intersectionto determine their position.

Inasmuch as these intersections are often used as clearance limits for air traffic separation purposes, the inherent hazards of such a practice become immediately apparent. It could happen that the fan marker or the aircraft marker receiver could fail without knowledge of the pilot or traffic oontrollers. The flight would then overfly the intersection and could possibly jeopardize other air traffic beyond that clearance limit.

It is most important, therefore, that all pilots be alert to this hazard and it is urged that they check both courses of radio ranges forming any intersections to which they are cleared, rather than rely on the fan marker reception alone.

VERY HIGH FREQUENCIES FOR PRIVATE PILOTS: Use of very high frequency channels by the majority of private pilots has heretofore been limited to the channels 121.5, 122.1,122.5 and 122.8 mc. Now, however, any private pilot having need for additional channels may apply to the FCC for use of any of the 40 channels in the 118.1 to 126.7 mc band. To determine their additional requirements, pilots should consult the Airman's Guide (Radio Facilities Section) or contact the nearest CAA regional office for information concerning the channels which have been implemented at the various locations. Of particular interest may be the channel 126.7 mc which was previously limited to use by air carriers for communication with CAA stations (INSACS) but now may be used by any private pilot if required for that purpose.

DVFR FLIGHT PLANS: When an IFR flight plan is canceled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

AIR TRAFFIC CLEARANCES: The initial traffic clearance issued to an aircraft prior to departure will normally authorize flight to the point of first intended landing, with instructions to maintain the altitude at which the aircraft enters the next control area. The pilot should request any desired altitude changes en route. Better service can be given the pilot if any altitude change is requested at the time the change is desired. An amendment to the initial clearance may be issued to a flight at any time an air traffic controller deems such action necessary to avoid possible confliction between en route, landing, or departing aircraft A flight is always cleared to a specific point or location (radio or visual reporting point), defined as a clearance limit. If the assigned altitude is below the minimum for a subsequent portion of the flight and radio failure is experienced, the procedures outlined under TWO-WAY RADIO FAILURE must be followed to insure proper terrain clearance.

Whenever an aircraft has been cleared to a point other than the destination airport it is the responsibility of Air Traffic Control to issue whatever further clearance is appropriate at least five minutes before the aircraft arrives at the clearance limit, unless holding instructions and a time at which the pilot may expect further clearance have been received and acknowledged by the pilot. In the event a pilot arrives at a clearance limit without having received either a clearance beyond or holding instructions at such fix, he should immediately request further clearance and hold at the clearance limit, maintaining the last assigned altitude, until further clearance is received. When a clearance limit is a point other than the destination airport, the altitude of the aircraft at this clearance limit will be protected so that separation will exist in the event the aircraft must hold awaiting further clearance. NOTE: The foregoing should not be construed as being related in any way to the procedures which apply when a two-way radio failure occurs.

✓ VOR FLIGHT TESTS: The RTCA has requested the CAA and the U. S. Navy to conduct flight tests of two VOR facilities operating on the same frequency with a geographical spacing of about 100 miles to obtain in-flight interference and VOR station spacing data. The tests will be conducted between the Patuxent, Maryland and the Gordonsville, Virginia VOR facilities in the near future. Appropriate NOTAMS will be issued prior to actual flight tests.

✓ CORRECTION TO AIRMAN'S GUIDE: Correct Airman's Guide, Vol. 6, No. 24, dated February 12, 1952, by adding the following paragraph to AMENDMENT No. 14 to Part 608-DANGER AREAS, appearing on Page 80:

In Section 608.39, a Clovis, New Mexico, area is added to read: Location: CLOVIS (Albuquerque Chart). Description: N boundary: lat 34-21-10; E boundary: long. 103-44-45; S boundary: lat 34-12-25; W boundary: long. 103-51-00. Altitudes: Surface to 30,000'. Time: Continuous. Using Agency: Clovis AFB, Clovis, N. Mex.

✓ INSTRUMENT APPROACH PROCEDURES: The standard instrument approach procedures for the following airports have been CANCELLED: Low Frequency Radio Range: New York, N.Y., Floyd Bennett NAS, Procedures No. 1 and 2. Instrument Landing System: Miami, Fla., International Arpt (Rnwy 12).

✓ NON-STANDARD HOLDING PATTERNS: Effective immediately the following non-standard holding patterns are established: (1) Chatham, N.J. MH facility; direction from holding point - 236° direction of turn- Left, time- 2 minutes.

(2) Chatham, N. J.MH facility, direction from holding point- NW; direction of turn- Left on the N side of the NW crs of the Newark, N.J. rng.

(3) San Francisco, California LF range: Direction from holding point-NW; direction of turn - right on W side of NW crs of San Francisco LF range; time - 1 minute.

(4)Oakland, California LF range. Direction from holding point -NW; direction of turn-right on W side of NW crs of Oakland LF range; time - 1 minute.

(5) Dixon, California radio beacon. Direction from holding point - N on N crs of Travis LF range; direction of turn - left on E side of N crs of Travis LF range time - 2 minutes.

(6) Sacramento, California ILS outer compass locator. Direction from holding point -SW; direction of turn-right on the S side of the Sacramento ILS localizer crs; time - 1 minute.

(7) Newark, California radio beacon. Direction from holding point- SE on the SE crs of the Oakland, California LF range; direction of turn-right on the E side of the SE crs of Oakland LR range; time-1 minute.

(8) Elko, Nevada. Direction from holding point- S; direction of turn-left on W side of S crs of Elko LF range; minimum altitude 12,000'.

Effective immediately the following non-standard holding patterns are amended: (1) Flatbush, N.Y., MH; direction from holding point- SW; direction of turn-right on SE side of the SW crs of the La Guardia lclzr.; time - 1 minute.

(2) New Rochelle, N.Y., MH. Direction from holding point - NE; direction of turn -right on the NW side of the NE crs of La Guardia rng.; time - 1 minute.

✓ MINIMUM EN ROUTE INSTRUMENT ALTITUDE: Effective February 19, 1952, minimum en route instrument altitude are amended as follows:

(1) Red Civil Airway No. 9, is amended to read in part:

FROM	TO	MIN. ALT.
Phoenix, Ariz.(LFR)	Winslow, Ariz. (LFR)	10,000

(2) Red Civil Airway No. 13, is amended by adding:

Butler, Pa. (RBN)	Philipsburg, Pa.(LFR)	4,000

(3) Red Civil Airway No. 15, is amended to read in part:

Prescott, Ariz.(LFR)	Phoenix, Ariz.(LFR)	10,000

(4) Red Civil Airway No. 21, is amended to read in part:

Williamsport, Pa.(LFR)	Int. NE crs. Allentown, Pa. (LFR) & NW crs. Newark, N.J. (LFR)	4,000

(5) Red Civil Airway No. 29, is amended by adding:

Williamsport, Pa.(LFR)	Int. N crs. Williamsport, Pa. (LFR) & SW crs. Elmira, N.Y. (LFR)	4,000

(6) Direct Route-SE United States is amended by adding:

Dyersburg, Tenn.(VOR) (RBN)	Nashville, Tenn.(VOR) (LFR)	2,500

(7) Direct Route-NE United States is amended by adding:

New Brunswick (INT), N.J.	Flatbush, N.Y. (RBN)	1,500
New Brunswick (INT), N.J.	Chatham, N.J. (RBN)	2,000

✓ DANGER AREA DESIGNATIONS: The following Danger Area amendment shall be effective as dated unless otherwise advised:

AMENDMENT NO. 15 to Part 608 - DANGER AREAS
(March 1, 1951)

(1) In Section 608.14, the Holtville, Calif. area published on June 13, 1951 in 16 F. R. 5616 is revised to read: Location: HOLTVILLE (San Diego Chart); Description: Beginning at lat 33-05-00, long. 115-17-30; SE to lat. 33-00-00, long. 115-13-30; SE to lat. 32-51-00, long. 115-05-30; due W to long. 115-17-00; N to lat. 32-58-00, long. 115-17-30; NNW to lat. 33-05-00, long. 115-20-00; due E to lat. 33-05-00, long. 115-17-30, point of beginning; Altitude Surface to unlimited; Time: Continuous; Using Agency: Commandant, 11th Naval District, San Diego, Calif.

(2) In Section 608.14, a Mojave, Calif. area is added to read: Location: MOJAVE (Los Angeles Chart); Description: N boundary: lat 35-06-30, E boundary: long. 117-57-30, S boundary: lat. 35-02-30; W boundary: long. 118-05-45; Altitudes: Surface to unlimited; Time: Continuous; Using Agency: Marine Corps Air Station, Mojave, Calif.

(3) In Section 608.14, a Sand Hills, Calif. area is added to read: Location: SAND HILLS (San Diego Chart); Description: Beginning at lat. 32-58-30, long. 115-03-50; SE to lat. 32-51-30, long. 114-55-00; due W to long. 115-04-00; NW to lat. 32-57-30, long. 115-09-50; due N to lat. 32-58-30; due E to lat. 32-58-30, long. 115-03-50, point of beginning; Altitudes: Surface to unlimited; Time: Continuous; Using Agency: Commandant, 11th Naval District, San Diego, Calif.

(4) In Section 608.19, the Lakeland, Ga. area published on July 8, 1949 in 14 F. R. 3772 is deleted.

✓ TEMPORARY CONTROL AREA EXTENSION: The following control area extension shall be effective from 0001 CST March 10, 1952 to 2400 CST April 15, 1952. At the end of the above period it shall be revoked: Control area extension (Columbia, S. C.) All that area within 5 miles either side of a direct line extending from the intsxn of the SW crs of the Shaw AFB, Sumter, S. C. rdo rng and the SE crs of the Columbia, S. C. rdo rng to the Aiken, S. C. non-directional rdo bcn. From the intsxn of the W crs of the Augusta, Ga. rdo rng and a line bear. 55° true from the Macon, Ga. rdo rng stn via the Macon, Ga. rdo rng stn; the Columbus, Ga. ILS outer mrkr to the intsxn of the NW crs of the Lawson AFB, Columbus, Ga. rdo rng and the E crs of the Maxwell AFB, Montgomery, Ala. rdo rng, excluding the portion which overlaps danger areas.

✓ CIVIL AIRWAY, CONTROL AREA, CONTROL AREA EXTENSION, CONTROL ZONE, AND REPORTING POINT AMENDMENTS: Effective 0001 EST March 18, 1952, unless otherwise advised, civil airways, control areas, control area extensions, control zones and reporting points will be amended in whole or in part as follows:

CIVIL AIRWAYS: (1) Red civil airway No. 9 (San Diego, Calif. to Winslow, Ariz) is amended by changing last portion to read: From the Phoenix, Ariz. rdo rng stn via the Payson, Ariz. non-directional rdo bcn to the Winslow, Ariz. rdo rng stn.

(2) Red civil airway No. 14 is amended to read: (Lone Rock, Wis. to Bowling Green, Ky.) From the Lone Rock, Wis. rdo rng stn via the Rockford, Ill. rdo rng stn; the intsxn of the SE crs of the Rockford, Ill. rdo rng and the W crs of the Chicago, Ill. rdo rng; Chicago, Ill. rdo rng stn; Indianapolis, Ind. rdo rng stn to the intsxn of the S crs of the Indianapolis, Ind. rdo rng and the W crs of the Louisville, Ky. rdo rng. From the intsxn of a line bear. 354° true from the Godman AFB, Ft. Knox, Ky. non-directional rdo bcn and the W crs of the Louisville, Ky. rdo rng via the Godman AFB non-directional rdo bcn to the intsxn of a line bearing 171° true from the Godman AFB non-directional rdo bcn and the NE crs of the Bowling Green, Ky. rdo rng, excluding the portion which overlaps danger areas.

(3) Red civil airway No. 27 (Atlanta, Ga. to Detroit, Mich.) is amended by deleting the portion AFTER the Corbin, Ky. rdo rng stn which reads: Lexington, Ky. VHF rdo rng stn; the intsxn of the N crs of the Lexington, Ky. VHF rdo rng and the SW crs of the Cincinnati, Ohio rdo rng; and by ADDING the following portion in lieu thereof: "the intsxn of the N crs of the Corbin, Ky. VHF VAR rdo rng and line bearing 150° true from the Lexington, Ky. non-directional rdo bcn; Lexington, Ky. non-directional rdo bcn; the intsxn of a line bearing 358° true from the Lexington, Ky. non-directional rdo bcn and the S crs of the Dayton, Ohio rdo rng"; Dayton, Ohio rdo rng stn.....

(4) Red civil airway No. 74 is amended to read: (Louisville, Ky. to Cincinnati, Ohio) From the Louisville, Ky. rdo rng stn via the intsxn of the N crs of the Louisville, Ky. rdo rng and a line bear. 241° true from the Cincinnati, Ohio rdo rng stn to the Cincinnati, Ohio rdo rng stn.

(5) Blue civil airway No. 21 is amended by changing caption to read: (Louisville, Ky. to Erie, Pa.) and by ADDING a first portion to read: From the intsxn of the S crs of the Louisville, Ky. rdo rng and a line bear. 268° true from the Lexington, Ky. non-directional rdo bcn via the Lexington, Ky. non-directional rdo bcn; the intsxn of a line bear. 82° true from the Lexington, Ky. non-directional rdo bcn and the SW crs of the Huntgington, W. Va. rdo rng to the intsxn of the E crs of the Louisville, Ky. rdo rng and the SW crs of the Huntington, W. Va. rdo rng." From the Charleston, W. Va. rdo rng stn.....

(6) Blue civil airway No. 44 (Advance, Mo. to U. S. Canadian Border) is amended between Advance, Mo. and Ft. Wayne, Ind. to read: From the Advance, Mo. rdo rng stn via the Paducah, Ky. non-directional rdo bcn; Evansville, Ind. rdo rng stn; Indianapolis, Ind. rdo rng stn; the intsxn of the S crs of the Goshen, Ind. rdo rng and the SW crs of the Ft. Wayne, Ind. rdo rng; Ft. Wayne, Ind. rdo rng stn."

(7) Blue civil airway No. 87 is amended to read: (Lexington, Ky. to Dayton, Ohio). From the Lexington, Ky. non-directional rdo bcn via the intsxn of a line bear. 7° true from the Lexington, Ky. non-directional rdo bcn and the S crs of the Wright-Patterson, Ohio AFB rdo rng; Wright-Patterson AFB rdo rng stn to the intsxn of the NE crs of the Wright-Patterson AFB rdo rng and the W crs of the Columbus, Ohio rdo rng.

CONTROL AREAS: Red civil airway No. 14 is amended by changing caption to read: (Lone Rock, Wis. to Bowling Green, Ky.)

(2) Red civil airway No. 74 is amended by changing caption to read: (Louisville, Ky. to Cincinnati, Ohio).

(3) Blue civil airway No. 21 is amended by changing caption to read: (Louisville, Ky. to Erie, Pa.)

(4) Blue civil airway No. 44 (Advance, Mo. to U. S. Canadian Border) is amended by changing the first portion to read: All of Blue civil airway No. 44 including all that area within 5 miles either side of the enroute radials from the Evansville, Ind. omnirng stn.

(5) Blue civil airway No. 87 is amended by changing caption to read: (Lexington, Ky. to Dayton, Ohio).

CONTROL AREA EXTENSIONS: (1) Control area extension (Lexington, Ky.) is amended by correcting the bear. 225° true to read: 222° true and by deleting the last portion which reads: extending 5 miles either side of a line bear. 150° true from the beacon to its intsxn with the NW crs of the Corbin, Ky. VHF VAR rdo rng, and extending 5 miles either side of a direct line from the Lexington non-directional rdo bcn to the Greater Cincinnati Arpt outer mrkr.

(2) Control area extension (Paducah, Ky.) is added to read: All that area within 5 miles either side of a line bear. 220° true extending from the Paducah, Ky. non-directional rdo bcn to a point 20 miles SW.

CONTROL ZONES: (1) Big Spring, Texas control zone is amended by correcting name of arpt to read: Big Spring AFB.

✓ USE OF RADIO NAVIGATIONAL FACILITIES REQUIRING FLIGHT CHECK: When a flight check of a radio navigational facility is required, a NOTAM will be issued stating: "Ground checked only, awaiting flight check." When this type of NOTAM is issued, the following will apply:

(1) If the facility is very high frequency, the navigational feature will be shut down and no utilization for navigational purposes will be authorized.

(2) If the facility is low frequency (200 to 400 kc) non-simultaneous type range, the navigational feature will be shut down and no utilization for navigational pruposes will be authorized.

(3) If the facility is low frequency (200 to 400 kc) simultaneous type range, it may be used as a homing facility only.

(i) In addition, this type of facility may be used as an ADF approach aid by scheduled air carriers, provided that their operations specifications authorize an ADF instrument approach to the airport concerned.

(ii) Irregular air carriers and other operators may use this type facility as an ADF instrument approach aid if an ADF procedure for the airport concerned is prescribed by the Administrator, or if an approach is conducted using the same course for an ADF track as that specified in the approved range procedure and with identical altitudes as used in the range approach.

In accordance with these radar procedures departing IFR acft will be provided at least 3 mi horizontal separation from all other known IFR traffic unless standard IFR separation exists and will continue to exist. As additional services, in so far as practicable, separation as specified above will be provided, regardless of weather conditions, between acft departing on IFR flight plans and any other traffic observed on the radar scope whose altitude is not known or whose altitude is the same as the altitude of the acft being controlled and, radar traffic advisory info will be supplied to acft departing VFR. Many factors (such as limitations of the radar, volume of traffic, controllers work load, and frequency congestion) may prevent the controller from providing the additional services mentioned above. The controller will have complete discretion in determining whether he is able to provide, or to continue to provide, these additional services in a specific case. The controllers decision against providing, or continuing to provide, these additional services will be dependent entirely upon whether the controller believes he is in a position to provide them. Copies of the detailed radar departure procedures may be obtained from the Washington National Tower or Washington Air Route Traffic Control Center. (1-3)

DANGER AREA DESIGNATION

AMENDMENT NO. 16 to Part 608 - DANGER AREAS

(Effective March 10, 1952)

In Section 608.51, Fort Hood, Texas (Exercise Longhorn), temporary areas are added to read: Name and Location: FORT HOOD (EXERCISE LONGHORN) (Austin and Dallas Charts); Description: AREA A: A circle with a radius of 40 miles centered at the town of Adamsville, Texas, at lat. 31-18-00, long. 98-10-00, and excluding those portions of the circle that overlap control areas, civil airways, and the Camp Hood and Gray AFB danger areas, and extending 5 miles either side of a centerline along lat. 31-10-30 from the W edge of the circle to long. 99-15-00, and extending 5 miles either side of a centerline along lat. 31-40-30 from the E edge of the circle to Amber Civil Airway No. 4; Altitudes: Surface to 10,000' MSL; Time: Continuous, March 10, 1952 through April 15, 1952; Using Agency: Joint Operations Center, North Fort Hood, Texas.

AREA BC: Description: A corridor 5 miles either side of a centerline extending from lat. 31-10-30, long. 99-15-00, along lat. 31-10-30 to intersect Red Civil Airway No. 38; Altitudes: Surface to 4000' MSL; Time: Continuous, March 10, 1952 through April 15, 1952; Using Agency: Joint Operations Center, North Fort Hood, Texas.

AREA D: Description: Beginning at a point at the W edge of the control area at Waco, Texas at lat. 31-36-00, long. 97-22-40; NW along the W edge of Amber Civil Airway No. 4 to lat. 31-50-00, long. 97-35-00; NW to lat. 32-15-00, long. 97-57-30; due W to long. 99-15-00; due S to lat. 30-30-00; due E to the Austin, Texas control area extension at long. 98-06-10; northerly and easterly around this control area to the control area along Amber Civil Airway No. 4 at lat. 30-41-00, long. 97-41-20; northeasterly along the W edge of this control area to lat. 31-36-00, long. 97-22-40, point of beginning, excluding that portion which overlaps "AREA A", and those portions which overlap the Camp Hood and Gray AFB danger areas; Altitudes: 2500' MSL to 10,000' MSL; Time: Continuous, March 10, 1952 through April 15, 1952; Using Agency: Joint Operations Center, North Fort Hood, Texas.

SPECIAL DANGER CHART
USAF TEXAS MANEUVERS

"EXERCISE LONG HORN": Effective 10 March 1952 through 15 April 1952, inclusive, the United States Air Force will conduct intensive maneuvers in the general area of Adamsville, Texas. These maneuvers will involve the flight of a large number of aircraft operating during both VFR and IFR weather conditions within the areas shown, which have been set aside for the use of maneuver aircraft. Cross-country flights of non-maneuver aircraft will avoid areas. Flight of non-maneuver military and civil aircraft within the areas during both VFR and IFR conditions will be permitted as indicated by the legend.

LEGEND

AREA A - Danger Area Surface to 10,000 ft. above MSL
No flights permitted.

AREA BC - Danger Area Surface to 4,000 ft. above MSL
No flights permitted.

AREA D - Danger Area 2,500 to 10,000 ft. above MSL
Flights permitted only with IFR Flight Plans approved prior to take-off by Joint Operations Center. Local CAA ATC or USAF Flight Service will process clearance requests.

AREA E - Danger Area Surface to Unlimited Altitude
No flights permitted. (Arrangements have been made for ingress and egress of essential military flights to and from Gray AFB.)

The Controlling Agency is "JOINT OPERATIONS CENTER" (TACC), North Fort Hood, Texas.

Note: Under extenuating circumstances, civil flights may enter the above areas, except Area E, by receiving prior approval from the controlling agency.

Temporary Control Areas - (between Shreveport, La., and Maneuver Area)
Extensive Airlift Operations will be conducted along the routes indicated on the insert map, which will be designated as Control Areas during the period 10 March 1952 through 15 April 1952. Civil Air Regulations appropriate to flight within Control Areas will apply.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

AIR NAVIGATION RADIO AIDS

INSAC = Interstate Airway Communications Station (CAA).

VHF OMNI-RANGES: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

NOTE: See OMNIRANGE USE page 79.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSAC. (C) The station identification is monitored continuously by the communicator at the associated INSAC. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSAC. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored solely through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSAC, and located too distant from INSAC to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

LEGEND

(A) = Air Force facility. (N) = Navy facility. (P) = Private facility
(g) = Tower equipped with 121.9 or 121.7 mc transmitter for control of ground traffic. (7-19) = Hours of operation, i.e., 0700-1900
(U) = Unmonitored, but usable for navigation (3) = Monitoring category
(B) = Blue Hemisphere; (Y) = Yellow hemisphere
→ New or revised data
↙ New facilities or name changes, see page 20
* = Automatic voice identification

NOTE: Letters between range courses are quadrant identifiers, e.g., "90 YN 180" indicates the quadrant between the two courses is a yellow N quadrant. The letter immediately following a range course indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N" aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . Approach Control Tower, CAA (transmits on voice channel of associated L/MF range or ILS in addition to frequencies listed)
B. . . . Scheduled Broadcast Station (broadcasts weather at 15 & 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . Control Tower, CAA
CA. . . Control Tower, Air Force
CI. . . Control Tower (City, County, Private, etc.)
CN. . . .Control Tower, Navy
D. . . . Distantly controlled
FM. . . VHF fan marker (100 watts)
GCA. . Ground Controlled approach system
H. . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . Instrument Landing System (voice on localizer channel)
J. . . . L/MF (200-415 kc) voice facility on other than range frequency
LFM. . VHF fan marker, low powered (5 watts)
LMM. . Compass locator station when combined with middle marker of ILS
LOM. . Compass locator when installed at outer marker site or within 5.5 miles of MM
LVOR. . Low power VOR (with standby equipment)
MH. . Non-directional radio beacon (homing) power less than 50 watts
ML. . Range (loop radiators), power less than 50 watts
MM. .. VHF middle marker
MOR... Low frequency omni-directional range
MRA. . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL .. Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . VHF outer marker
P. . . . Point-to-Point radio
RA. . . Range (adcock, vertical radiators), power 150 watts or more
RL. . . Range (loop radiators), power 150 watts or more
S. . . . Simultaneous (range signals and voice) type of transmitter
T. . . . Teletype
TVOR. Low power VOR (no standby equipment) located on airport
TX. . . Principal teletype
V . . . . Additional VHF voice feature on other than range frequency
VAR. . Visual-aural VHF range
VOR. . Omni VHF omni-directional range (omni-range)
W . . . Without voice facilities on range frequency
Z . . . . VHF station location marker at a range station

FREQUENCY LEGEND

V = 135.9 and 135.0 mc transmitted.
# = Guards same VHF frequencies station transmits except 122.2 mc and 135.0 mc.
(1) = 3105, 4495 kc guarded
(2) = 3105, 4495 kc; 122.5 mc. This group of frequencies is group generally guarded by C.A.A. towers.
(3) = 3105, 4495 kc; 122.1, 126.7, 135.9 mc. This group of frequencies is group generally guarded by INSACS.
e.g., (3)-135.9, 122.1 guards every frequency in group (3) except 135.9 and 122.1
/ = Transmitting frequencies/ guarding frequencies.

NOTES

1. Range courses are magnetic in-bearings.
2. All C.A.A. MH facilities operate continuously unless cited as follows: (on req)
3. All C.A.A. ranges operate continuously. Those which are not manned continuously are cited in the class column with hours of operation in parentheses, e.g., (6-24)
4. When a VOR or VAR is controlled by an associated LF range, because of space limitation, DTV is not included in the VHF range class.

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

RADAR AVAILABLE : How and Where

PAR = PRECISION APPROACH RADAR. ASR = AIRPORT SURVEILLANCE RADAR.
GCA = GROUND CONTROLLED APPROACH - MILITARY EQUIVALENT OF COMBINED ASR AND PAR EQUIPMENT

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway. The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for this type of approach are at least as high as, and in some instances higher than, the regular circling minimums listed in the Flight Information Manual for the airport.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums, associated runways and GCA procedures are listed in the Flight Information Manual.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.

Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.

Emergency: When receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at the pilot's discretion.

After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible.

Civil minimums at military installations estabilshed by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums.

Navy units are prepared to transmit on HF from 2000 to 18,100 kc and receive any frequency from 1500 to 9050 kc to aid any plane in emergency.

Alt MSL=Min. alt. over airport.

(D) = Day. (N) = Night. → =New or revised data. ✓ = New facilities or name changes.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

CITY AND AIRPORT NAME

(AF) Airport name followed by city name in parenthesis (With AF in Type Column) - field owned or leased in whole by U.S. Air Force.

(AF) City and Airport Name (with C,I,M,MG or P in Type Column) - a civil airport with Air Force operations, reserve training, or other such acitvity thereon.

NOTE: Similar combinations of above two citations of A,N,CG, and NG indicate the same is applicable for Army, Navy, Coast Guard, and National Guard fields respectively.

(P) City and Airport Name - Civil Airport covered by an agreement between municipality and U.S. Government which permits use by transient military aircraft.

(PC) Same legal status as (P), but closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16.

* City, Site No., and Airway abbreviation - CAA intermediate field. Municipal airports with lights maintained by the CAA are listed similarly except there is no prefixed star.

NOTES:

1. MILITARY FIELDS ARE OPEN TO CIVIL AIRCRAFT ONLY BY PRIOR PERMISSION OF THE C.O. THEREOF. ALL AIRPORTS with C,I,M, or MG in type column are open to civil fliers.
2. USAF aircraft are permitted to use only those fields prefixed with an AF,A,N,NG,CG,P,PC or *.
3. When city and airport names are identical, the airport name is omitted to conserve space.

TYPE

AF	-Air Force	C	-Commercial	MG	-Misc. Govt
A	-Army (May also be used by Army Nat'l Guard)	CG	-Coast Guard	N	-Navy
		I	-Intermediate	NG	-Air Nat'l Guard
		M	-Municipal	P	-Private

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.

If orientation features are less than 1/2 mile from the field, distance is not specified

ELEVATION

Obviously, the effective length of a runway decreases with elevation above sea level. The C.A.A. formula for elevation correction is that a sea level runway length requirement must be increased 7% per 1000 feet of elevation above sea level. High temperatures also play an important role in reducing the effective length of runways.

NUMBER OF RUNWAYS

No differentiation is made between runways and strips as far as number of landing areas in field is concerned.

DIRECTORY OF AIRPORTS
LEGEND

LONGEST RUNWAY
FACILITIES

In this column are included the length and surfacing of the longest runway, the lighting and servicing facilities, and weather reports available.

RUNWAYS

The length of the longest paved runway or non-paved strip is stated in hundreds of feet. If the length is not prefixed, the surface is sod, clay, gravel, etc.

h - runway is paved (concrete, asphalt or similar type of paving)

aw - allway field

(26) - runway or strip length not verified by C.A.A.

LIGHTS

B: Rotating Light (Rotating beacon) (Green and white, split-beam and other types) Omission of B indicates rotating light is either not available or not operating standard hours (sunset-sunrise).

NOTE: Code lights are not codified, and are carried in Remarks Column.

L: Field Lighting

- L - by itself indicates temporary lighting, such as flares, smudge pots, lanterns.
- 1 - Portable lights (Electrical)
- 2 - Boundary
- 3 - Runway floods
- 4 - Runway or Strip
- 5 - Instrument approach (neon)
- 6 - High intensity runway
- 7 - High intensity instrument approach

* An asterisk preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise by request (circling the field or radio call).

Because the obstructions on virtually all lighted fields are obstruction lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage
S2: Storage, minor aircraft repairs
S3: Storage, minor aircraft, and minor engine repairs
S4: Storage, major aircraft, and minor engine repairs
S5: Storage, major aircraft, and major engine repairs

NOTE: Any S combination without parenthesis indicates only full-time day attendant. Fields having lighting facilities may have 24 hours attendant available.

Any S combination in parenthesis-part time or irregular attendant.

WEATHER

W: Weather reports available from Weather Bureau or C.A.A. communications station on field.

UNICOM

U: Unicom (Aero Advisory station transmitting and receiving on 122.8 mc).

FUEL OCTANE

Civil Fuel:

F1: 80 oct., at least
F2: 87 oct., and lower
F3: 91 oct., and lower
F4: 100 oct., and lower

NOTE: If only one octane available, this octane cited, and not coded.

FUEL OCTANE (cont)

Any F combination without parenthesis indicates full time day attendant, in parenthesis part-time or irregular attendant.

Air Force and Navy Fuel

A+: 115/145 oct.
A : 100/130 oct.
B : 91/96 oct.
C: 73/80 oct.
J: Jet Fuel

REMARKS

(a) "INACTIVE" indicates usable civil field, but not being operated, at last inspection. Caution advised.

(b) "CLOSED" indicates closed to all traffic except in emergency.

(c) "OFL BUS ONLY" indicates closed to all transient military aircraft except on official business or in emergency. U.S. Aircraft require written orders. "AF OFL BUS ONLY" or "NAVY OFL BUS ONLY" indicates applicability of restriction only to Service indicated.

(c) "INACT - NO FACS" indicates AF airfields used exclusively by the USAF or municipal fields used jointly by the USAF and civil interest at which both USAF and civil interest are inactive; these will be available to military aircraft at the discretion of the Commanding Officer of the organization to which aircraft are assigned.

(e) "CIVIL FACS ONLY" indicates municipal fields under joint control or ownership of the USAF and/or Navy and civil interests at which no USAF or Navy facilities are available. Such fields may be used by military aircraft; however, only commercial service is available.

(f) "LIMITED USE" indicates some special restriction on use of field which will be listed in Notices to Airmen section of Airman's Guide.

(g) "ABANDONED" indicates reverted to non-airport usage such as farming or grazing.

(h) "REPORTED ABANDONED" indicates an airport reported abandoned but not verified as such by C.A.A.

(i) "FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

(j) "Blkd" indicates approaches where glide angle to runway is 3:1 or less.

(k) "Rgt tfc N" indicates right turns should be made on landings and take-offs to N.

(l) "A,B" indicates Air Force or Navy fuel. See Fuel Octane column.

NOTES

1. → New or revised data.
2. SCHEDULED AIRLINE STOP airport names are capitalized.
3. PRIVATE AIRPORTS: Usually unattended, offer no public service and solicit no public patronage. Such fields are listed primarily because of their possible utility as emergency landing areas. Use of these fields is at the risk of the user. No "S" or "F" combination is ever assigned these fields.
4. OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, for example, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.
5. NEW AIRPORTS: At the end of each state, under this heading will be found, out of alphabetical alignment, all the new airports tabulated after the type for that state had been originally set up.

NOTICES TO AIRMEN

SPECIAL NOTICES

NAVY SPECIAL NOTICES

NAVY DATA: In accordance with Hydrographic Office Memorandum for Aviators, No. 17, September 17, 1948, before any changes or modifications of any aid to air navigation, such as realignment of radio ranges, modified instrument approach procedures, relocation of fan markers, etc., can be published by the Hydrographic Office, the Command requesting the change must first obtain approval from the Office of Chief of Naval Operations, Navy Department, Washington 25, D. C. When an approved change or modification has been made to any aid to air navigation, the Command shall immediately notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C.

All Naval Air Stations and Air Facilities are directed to notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C., direct, of all contemplated or immediate changes in their field facilities, operation rules, air-ground communication facilities, GCA, etc., and other factors affecting safe operation of aircraft which do not necessitate approval from CNO. This may be done by letter, speedletter, or dispatch, as applicable.

In accordance with Chief of Naval Operations Aviation Circular Letter 19-49 March 2, 1949, approval for the closing of any Navy or Marine Corps Air Station or Air Facility to transient military aircraft for a period in excess of ten days must be obtained from the Chief of Naval Operations.

Commanding Officers of Naval and Marine Corps aviation activities are directed to review all information published by the Hydrographic Office, U. S. Air Force, Civil Aeronautics Administration, and Coast and Geodetic Survey on facilities under their command and immediately forward any corrections or approved amendments direct to the publishing agency. A copy of the corrections or amendments to information published by other agencies should be forwarded to the Hydrographic Office. The charts and publications issued by the above-mentioned agencies must be currently maintained in order that all aviators can be kept informed of changes to airfields, seaplane anchorages, navigational aids, and other factors affecting the safe operation of aircraft.

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA: Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to: Commanding Officer, USAF Aeronautical Chart and Information Service, Washington 25, D. C.; Attn: Aeronautical Information Division.

Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over ten days should be forwarded through channels to Headquarters, U. S. Air Force. Restrictions in Air National Guard fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration by Headquarters, USAF ACIS.

In connection with the above, the attention of all base operations officers is invited to A.F. Regulation 55-12 of July 1, 1949, subject, "Notices to Airmen", A. F. Regulation 5-16 of February 20, 1948, subject, "Responsibilities for Flight Publications", and to A. F. Regulation 60-23 of September 23, 1947, subject, "Restrictions on Landing at Army Airfields".

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of Air Force Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the nearest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant to itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

SPECIAL CHARTS OF ATOMIC ENERGY AIRSPACE RESERVATIONS: The Atomic Energy Commission has issued a special chart depicting airspace reservations in the United States. Copies of this chart are being supplied each Air Force Base, AF Reserve Unit, National Guard Unit and other activities on the same mailing list basis as used for Airman's Guide. Operations officers should prominently display this chart and assure that pilots contemplating flight adjacent to these areas are briefed upon their existence, location and restricted status.

COMPULSORY REPORTING POINTS - VAR RANGE FACILITIES: VAR Facilities designated by CAA and shown on radio facility charts as Compulsory Reporting Points will be applicable to USAF aircraft only if the aircraft is equipped with the necessary instruments and radio frequencies and if a flight plan has been filed with ATC declaring the intention to utilize these facilities. When ATC clearances include instructions using these facilities and the aircraft is not equipped for such use, the pilot should so advise the traffic control agency and request amended traffic control instructions.

USAF POLICY REGARDING USE OF INACTIVE FIELDS: In accordance with directive from Headquarters, USAF, Air Force fields which are on inactive status and are listed in the Directory as "INACT-NO FACS" will in the future be closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16, unless on official business with written orders.

AIR FORCE FOREIGN CLEARING STATIONS: Under the authority of Air Force Regulation 60-8 of July 6, 1949, U. S. Air Force aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated:

AFRICA and AZORES: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; Westover AFB, Mass.

ALASKA: Great Falls AFB, Mont.; McChord AFB, Wash.; Travis AFB, Calif.

BERMUDA: Brookley AFB, Ala.; MacDill AFB, Fla.; Mitchel AFB, N. Y.; Washington National Airport, D. C.; Travis AFB, Calif.; Westover AFB, Mass.

CANADA: Brookley AFB, Ala.; Great Falls AFB, Mont.; McChord AFB, Wash.; Mitchel AFB, N. Y.; Selfridge AFB, Mich.; Washington National Arpt, D. C.; Westover AFB, Mass.

The classified "Foreign Clearance Information Guide", published by Aeronautical Chart and Information Service and now distributed to all Air Force bases should be consulted prior to departure for foreign clearing station, particularly with regard to diplomatic requirements for country for which clearance is desired, in order that appropriate advance notice of flight may be given and delay at foreign station may be avoided.

CURRENT FEDERAL AIRWAYS MANUALS OF OPERATION: The following publications are now distributed in accordance with AF Regulation 5-12, and supersede listing given in paragraph 5 of this regulation. Base operations officers, weather and communication units should check copies in use to insure that latest issues and all revisions are available. Mailing lists are now maintained in accordance with groupings of material as follows:

GROUP I MATERIAL: II-B. Instructions for the Operation of Communications Facilities, First Edition, January 15, 1950 (This replaces II-B-2, II-B-3, II-B-5, II-B-7, II-B-8 and II-B-11); M-59, November 5, 1949 (Service "B").

GROUP II MATERIAL: Location Identifiers, Fourth Edition, July 1, 1950, with two revisions.

GROUP III MATERIAL: Contractions, Fifth Edition, December 1, 1949.

GROUP IV MATERIAL: Civil Airways Mileage Chart of December 27, 1950.

CIVIL SPECIAL NOTICES

CIVIL DATA: The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Obviously, temporary hazardous conditions should be reported to the aeronautical public at once. The necessity for reporting additional aids or minor changes in existing aids, however, isn't nearly as cogent. In other words, a temporarily closed airport is ordinarily of much more importance from a safety viewpoint than is a new airport, and the aeronautical public should be told about it as expeditiously as possible.

Notamizing of advice covering a field unusable because of flood or snow, a runway closed because of construction, or the erection of a pole-line in an approach, doesn't necessitate an engineering background on the part of the reporter. Too, safety frequently necessitates the notamizing of such advice before an official check can be made. On the other hand, advice covering permanent airport data changes, such as a new airport, or a lengthened landing strip, or an additional hangar, obviously doesn't require the same expeditious transmission to the aeronautical public, and the data may be checked from an engineering standpoint and for standardization before being publicized.

SUMMATION: (a) Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Development, Attention: W-155, CAA, Washington 25, D. C.)

(b) Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate C.A.A. District Airport Engineer for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

DIRECTORY OF AIRPORTS AND AIR NAVIGATION RADIO AIDS NOTAMS: Because of space limitation, the Airport Directory and Air Navigation Radio Aids perforce serve as a notam supplement. Notam data revising a previous Directory or ANRA are indicated by prefixed arrows. The only airport or radio data (other than temporary conditions of short duration) carried in the Notices to Airmen Section are facility coordinates, post-deadline data or data impossible to incorporate in the two above tabulations.

DIRECT COMMUNICATIONS WITH AIR ROUTE TRAFFIC CONTROL CENTERS: The CAA has inaugurated a procedure whereby pilots operating on IFR flight plans may have direct communication with air route traffic controllers at certain control centers. VHF on a simplex basis (call-up and reply on the same frequency) is used. This enables the controller to issue traffic clearances and receive indications of compliance therewith in such a manner that all air traffic is expedited. The center will guard the assigned frequency. However, each specific aircraft, with which the center desires to establish direct communication for control purposes, will receive a clearance through the appropriate CAA, AACS or Air Carrier Communications Station, indicating the time or place the controller desires to communicate directly with the pilot.

The locations at which this direct communications procedure is available are listed in the Air Navigation Radio Aids Section of the Airman's Guide. Each one is listed alphabetically following the tower listing.

OMNIRANGE INTERFERENCE: Airmen are requested to assist the CAA and the Radio Technical Commission for Aeronautics in confirming the practicability of operating VOR facilities 100 kc apart with a geographical spacing of only 130 statute miles. The Lynchburg, Va. VOR operates on 116.1 mc and the Washington National Airport TVOR oper operates on 116.2 mc. If interference is noted between these facilities it is requested that you notify the CAA, Washington 25, D. C., including information as to the altitude and distance at which interference is first noted, the make of omnireceiver in use, which station is causing the interference, and the manner in which the interference manifests itself.

INSAC VHF REPLY TO PRIVATE AIRCRAFT: The new national ground-to-air call-up and reply channel for communication with private aircraft, 122.2 mc, was implemented at certain INSACs on August 1, 1951. Eventually, all INSACs will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACs which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current NOTAMS for information on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call. When an INSAC is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACs have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occurring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciably higher rate of speed than the location identifier.

USE OF OMNIRANGE: The effectvieness of the omnirng (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirng over 360° of azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

AUTOMATIC VOICE IDENTIFICATION: Voice Identification is currently being added to a total of approximately 67 air navigational facilities (omnirange stations, outer compass locators and fan markers), distributed nationally so as to permit maximum pilot familiarization with this new feature.

Omnirange and outer compass locators where voice identification is already functioning are designated in the ANRA pages by an asterisk (*) in the 'code identification' column. The transmission consists of a voice announcement alternating with the usual Morse Code identification; e. g. ' Long Beach omni (voice) .-.. --. -... (LGB in code) '

At fan markers, the present tone identification (one dash, two dashes, etc.) is alternated with voice identification (e. g., New Rochelle fan). Since these facilities are not listed in the ANRA pages, a list of fan markers where voice identification has been added follows:

New Rochelle, N. Y.
La Habra, Calif.
Smyrna, Ga.

Pilots are invited to write CAA, Washington 25, D. C., attention W-380, with their com-

ments regarding voice identification, particularly such factors as readability, whether voice and 'code idents' are properly balanced as to loudness, whether any objectionable effect is noted, etc.

BROADCAST OF AVIATION FORECAST IN NEW YORK AREA: The U. S. Weather Bureau has inaugurated an Aviation Weather Broadcast serving the New York metropolitan area from its Aviation Forecast Center at LaGuardia Field, New York. The program is experimental and provides basic aviation weather forecast service for an area bounded roughly by Boston, Massachusetts; Albany, New York; Harrisburg, Pa. and Washington, D. C. The broadcast is continuous daily between hours of 0600E and 1800E. Station call KW085, frequency 162.55 mc, FM power 250 watts. Receiving units are installed at 15 airports in metropolitan area.

USE OF FAN MARKERS AT INTERSECTIONS: It has been reported that some pilots when cleared to an intersection formed by two range courses, and where a fan marker is also situated, merely fly one of the range courses and wait for the coded identification signals of the fan marker rather than check both range courses forming the intersection to determine their position.

Inasmuch as these intersections are often used as clearance limits for air traffic separation purposes, the inherent hazards of such a practice become immediately apparent. It could happen that the fan marker or the aircraft marker receiver could fail without knowledge of the pilot or traffic controllers. The flight would then overfly the intersection and could possibly jeopardize other air traffic beyond that clearance limit.

It is most important, therefore, that all pilots be alert to this hazard and it is urged that they check both courses of radio ranges forming any intersections to which they are cleared, rather than rely on the fan marker reception alone.

VERY HIGH FREQUENCIES FOR PRIVATE PILOTS: Use of very high frequency channels by the majority of private pilots has heretofore been limited to the channels 121.5, 122.1,122.5 and 122.8 mc. Now, however, any private pilot having need for additional channels may apply to the FCC for use of any of the 40 channels in the 118.1 to 126.7 mc band. To determine their additional requirements, pilots should consult the Airman's Guide (Radio Facilities Section) or contact the nearest CAA regional office for information concerning the channels which have been implemented at the various locations. Of particular interest may be the channel 126.7 mc which was previously limited to use by air carriers for communication with CAA stations (INSACS) but now may be used by any private pilot if required for that purpose.

USE OF RADIO NAVIGATIONAL FACILITIES REQUIRING FLIGHT CHECK: When a flight check of a radio navigational facility is required, a NOTAM will be issued stating: "Ground checked only, awaiting flight check." When this type of NOTAM is issued, the following will apply:

(1) If the facility is very high frequency, the navigational feature will be shut down and no utilization for navigational purposes will be authorized.

(2) If the facility is low frequency (200 to 400 kc) non-simultaneous type range, the navigational feature will be shut down and no utilization for navigational pruposes will be authorized.

(3) If the facility is low frequency (200 to 400 kc) simultaneous type range, it may be used as a homing facility only.

(i) In addition, this type of facility may be used as an ADF approach aid by scheduled air carriers, provided that their operations specifications authorize an ADF instrument approach to the airport concerned.

(ii) Irregular air carriers and other operators may use this type facility as an ADF instrument approach aid if an ADF procedure for the airport concerned is prescribed by the Administrator, or if an approach is conducted using the same course for an ADF track as that specified in the approved range procedure and with identical altitudes as used in the range approach.

AIR TRAFFIC CLEARANCES: The initial traffic clearance issued to an aircraft prior to departure will normally authorize flight to the point of first intended landing, with instructions to maintain the altitude at which the aircraft enters the next control area. The pilot should request any desired altitude changes en route. Better service can be given the pilot if any altitude change is requested at the time the change is desired. An amendment to the initial clearance may be issued to a flight at any time an air traffic controller deems such action necessary to avoid possible confliction between en route, landing, or departing aircraft. A flight is always cleared to a specific point or location (radio or visual reporting point), defined as a clearance limit. If the assigned altitude is below the minimum for a subsequent portion of the flight and radio failure is experienced, the procedures outlined under TWO-WAY RADIO FAILURE must be followed to insure proper terrain clearance.

Whenever an aircraft has been cleared to a point other than the destination airport it is the responsibility of Air Traffic Control to issue whatever further clearance is appropriate at least five minutes before the aircraft arrives at the clearance limit, unless holding instructions and a time at which the pilot may expect further clearance have been received and acknowledged by the pilot. In the event a pilot arrives at a clearance limit without having received either a clearance beyond or holding instructions at such fix, he should immediately request further clearance and hold at the clearance limit, maintaining the last assigned altitude, until further clearance is received. When a clearance limit is a point other than the destination airport, the altitude of the aircraft at this clearance limit will be protected so that separation will exist in the event the aircraft must hold awaiting further clearance. NOTE: The foregoing should not be construed as being related in any way to the procedures which apply when a two-way radio failure occurs.

√NEW INTERNATIONAL PHONETIC ALPHABET: Use of the international phonetic alphabet shown below will begin on April 1, 1952, at CAA communications stations, centers and towers. This alphabet is intended to replace the Able Baker Charlie alphabet now in use. In the interest of standardization, proper pronounciation aids are listed herewith:

A - Alfa	N - Nectar
B - Bravo (Brah' voe)	O - Oscar
C - Coca	P - Papa (Pop' a)
D - Delta	Q - Quebec (Kay beck')
E - Echo	R - Romeo
F - Foxtrot	S - Sierra
G - Golf	T - Tango
H - Hotel	U - Union
I - India	V - Victor
J - Juliett (Jool ee yet')	W - Whiskey
K - Kilo (Kee' loe)	X - Extra
L - Lima (Lee' mah)	Y - Yankee
M - Metro (Met' roe)	Z - Zulu

√ICAO REVISIONS TO NOTAM CODE: On April 1, 1952, ICAO revisions of the NOTAM Code will be effective. These revisions will affect the composition of some of the five-letter groups used in Notices to Airmen. For example, the previous Code group meaning "radio range not operative until further notice" (QAREN) will be replaced by QARCS, meaning "radio range (frequency) out of service for an unknown duration, (or, until.....)." Also, the group of conditions previously described as "hazardous due to...." will henceforth be described by use of the term "operative but caution advised due to....."

A number of other changes will be made to facilitate accurate reporting and to incorporate additional information in the Code. In view of the widespread use of the ICAO NOTAM Code, it is suggested that pilots and all interested persons become familiar with the Code revisions. For the convenience of all concerned, the complete NOTAM Code as revised April 1, 1952, will be published in the March 25, 1952 issue of the Airman's Guide.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

VOR FLIGHT TESTS: The RTCA has requested the CAA and the U. S. Navy to conduct flight tests of two VOR facilities operating on the same frequency with a geographical spacing of about 100 miles to obtain in-flight interference and VOR station spacing data. The tests will be conducted between the Patuxent, Maryland and the Gordonsville, Virginia VOR facilities in the near future. Appropriate NOTAMS will be issued prior to actual flight tests.

√AIR ROUTE TRAFFIC CONTROL AREA BOUNDARY AMENDMENT: Effective May 1, 1952, the Minneapolis-Winnipeg Air Route Traffic Control Area Boundary will be relocated to 25 miles N of Pembina, N. D. rng on Blue airway No. 8.

√ON-REQUEST REPORTING POINTS: Effective immediately the following on-request reporting points are established:

(1) MARION INTERSECTION - The intersection of the NW crs of Craig AFB rng, Ala. and the W crs of Maxwell AFB rng, Ala.

(2) HYDE PARK INTERSECTION - The intersection of the N crs of Poughkeepsie, N. Y. rng and the NE crs of Stewart, N. Y. rng.

(3) WEST POINT INTERSECTION - The intersection of the S crs of Poughkeepsie, N. Y. rng and the SE crs of Stewart, N. Y. rng.

(4) NEW CANAAN INTERSECTION - The intersection of the NE crs of Newark, N. J. rng and the NW crs of Islip (VAR) N. Y. rng.

Effective immediately the following reporting points are redefined:

(1) MID-LAKE INTERSECTION - The intersection of the NE crs of Chicago, Ill. (LF) rng and a line bearing 293° true from the South Bend, Ind. (LF) rng.

(2) GEORGETOWN INTERSECTION - The intersection of the E crs of Louisville, Ky. (LF) rng and a line bearing 007° true from the Lexington, Ky. rbn.

√DANGER AREA DESIGNATIONS: The following danger area amendments shall be effective as dated unless otherwise advised:

AMENDMENT NO. 17 to PART 608 - DANGER AREAS
(March 12, 1952)

In (1) In Section 608.33, a Lake City, Missouri, area is added to read: Location: LAKE CITY (Kansas City Chart); Description: A circluar area having a radius of 2 miles, centered at lat. 39-06-00, long. 94-13-40; Altitudes: Surface to 3000'; Time: Continuous; Using Agency: Lake City Arsenal, Independence, Missouri.

AMENDMENT NO. 18 to PART 608 DANGER AREAS
(March 19, 1952)

In Section 608.52, a Great Salt Lake, Utah temporary area is added to read: Location: GREAT SALT LAKE (Salt Lake City Chart); Description: Beginning at lat. 41-04-00, long. 112-38-00; SE to lat. 40-57-00, long. 112-30-00; due W to long. 112-50-00; due N to lat. 41-10-00; SE to lat. 41-04-00, long. 112-38-00, point of beginning; Altitudes: Surface to unlimited; Time: Continuous, March 19, 1952 through April 30, 1952; Using Agency: Hdqs, 15th Air Force.

√MINIMUM EN ROUTE INSTRUMENT ALTITUDE: Effective March 25, 1952, minimum en route instrument altitudes are amended as follows:

(1) Green Civil Airway No. 9 is amended to read in part:

FROM	TO	MIN. ALT.
Honolulu, T. H. (LFR)	North Maui (Int), T. H.	6,000

(2) Blue Civil Airway No. 37, is amended to read in part:

Medicine Bow (Int), Wyo.	Casper, Wyo (LFR)	*11,000

9,000' - Minimum crossing altitude at Casper (LFR), southbound

(3) Blue Civil Airway No. 63 is amended to eliminate:

Pomona (Int), Kans.	Topeka, Kans. (VAR)	2,400

(4) Blue Civil Airway No. 76 is amended to read in part:

Casper, Wyo. (LFR)	Sinclair, Wyo. (LFR)	*11,000

9,000' - Minimum crossing altitude at Casper (LFR), southwest-bound

(5) Blue Civil Airway No. 80 is added to read:

Garden City, Kans. (LFR)	Goodland, Kans. (RBN)	6,000

√CIVIL AIRWAY, CONTROL AREA, CONTROL AREA EXTENSION and CONTROL ZONE AMENDMENTS: Effective March 18, 1952, civil airways, control areas, control area extensions, control zones are amended in whole or in part as follows:

(1) Green Civil Airway No. 9 (Hawaiian Islands) is amended by changing last portion to read: "excluding the portion below 6,000' which overlaps the Kaneohe Naval Airspace Reservation."

Control Areas: Green Civil Airway No. 4 (Los Angeles, Calif. to Philadelphia, Pa.) is amended between the Kansas City, Mo. omnirange station and the Columbia, Mo. omnirng station by adding the following portion to read: "excluding the portion below 4,000' which overlaps the Lake City, Mo. Danger Area."

Control Area Extension: Control Area Extension (Kansas City, Mo.) is amended by adding the following portion to present control area extension: "and excluding the portion below 4,000' which overlaps the Lake City, Mo. Danger Area."

(2) Control Area Extension (Lexington, Ky.) Within 5 miles either side of a line bearing 222° True extending from the Lexington, Ky., non-directional radio beacon to a point 20 miles southwest, and within 5 miles either side of the 123° True radial of the Lexington omnirange extending from the omnirange station to a point 25 miles southeast."

Control Zone: (1) New York, N. Y. control zone (Floyu Bennett NAS) is revoked.

(2) New York, New York control zone is amended to read: Within a 5 mile radius of the New York International Airport including a 5 mile radius of the Floyd Bennett NAS, extending 2 miles either side of the southeast course of the Idelwild, N. Y. rdo rng to its intersection with the southwest course of the Mitchel AFB radio range, extending 2 miles either side of the southwest course of the Idlewild, N. Y. radio range to its intersection with the northeast course of the Philadelphia, Pa. radio range and extending 2 miles either side of a direct line from the Scotland, N. Y. non-directional radio beacon to the Floyd Bennett NAS.

(3) Lexington, Ky. control zone is amended to read: Within a 5 mile radius of the Blue Grass Airport, Lexington, Ky. within 2 miles either side of a line bearing 222° true from the Lexington non-directional radio beacon to a point 10 miles southwest of the non-directional beacon and within 2 miles either side of the 303° and 123° True radials of the Lexington omnirange extending from the Blue Grass Airport control zone to a point 10 miles southeast of the omnirange station.

√AERONAUTICAL CHART CORRECTIONS: (1) Correct RF chart 23A by changing the identification of Kedzie Low Power Fan Marker to: dot dot.

(2) Huntington Sectional Chart, dated January 7, 1952, reverse the A and N quardants on the NW leg of Gordonsville rng.

DIST. OF COLUMBIA WASHINGTON CONTROL ZONE-RADAR DEPARTURE CONTROL SPECIAL NOTICE: Jan 7, radar departure procedures were inaugurated for acft departing on IFR flight plans from the Washington Control Zone. Rdo freqs 120.7 mc and 119.7 mc will be utilized for this purpose. In accordance with these radar procedures departing IFR acft will be provided at least 3 mi horizontal separation from all other known IFR traffic unless standard IFR separation exists and will continue to exist. As additional services, in so far as practicable, separation as specified above will be provided, regardless of weather conditions, between acft departing on IFR flight plans and any other traffic observed on the radar scope whose altitude is not known or whose altitude is the same as the altitude of the acft being controlled and, radar traffic advisory info will be supplied to acft departing VFR. Many factors (such as limitations of the radar, volume of traffic, controllers work load, and frequency congestion) may prevent the controller from providing the additional services mentioned above. The controller will have complete discretion in determining whether he is able to provide, or to continue to provide, these additional services in a specific case. The controllers decision against providing, or continuing to provide, these additional services will be dependent entirely upon whether the controller believes he is in a position to provide them. Copies of the detailed radar departure procedures may be obtained from the Washington National Tower or Washington Air Route Traffic Control Center. (1-3)

SPECIAL DANGER CHART
USAF TEXAS MANEUVERS

"EXERCISE LONG HORN": Effective 10 March 1952 through 15 April 1952, inclusive, the United States Air Force will conduct intensive maneuvers in the general area of Adamsville, Texas. These maneuvers will involve the flight of a large number of aircraft operating during both VFR and IFR weather conditions within the areas shown, which have been set aside for the use of maneuver aircraft. Cross-country flights of non-maneuver aircraft will avoid areas. Flight of non-maneuver military and civil aircraft within the areas during both VFR and IFR conditions will be permitted as indicated by the legend.

LEGEND

AREA A - Danger Area Surface to 10,000 ft. above MSL
No flights permitted.

AREA BC - Danger Area Surface to 4,000 ft. above MSL
No flights permitted.

AREA D - Danger Area 2,500 to 10,000 ft. above MSL
Flights permitted only with IFR Flight Plans approved prior to take-off by Joint Operations Center. Local CAA ATC or USAF Flight Service will process clearance requests.

AREA E - Danger Area Surface to Unlimited Altitude
No flights permitted. (Arrangements have been made for ingress and egress of essential military flights to and from Gray AFB.)

The Controlling Agency is "JOINT OPERATIONS CENTER" (TACC), North Fort Hood, Texas.

Note: Under extenuating circumstances, civil flights may enter the above areas, except Area E, by receiving prior approval from the controlling agency.

Temporary Control Areas - (between Shreveport, La., and Maneuver Area)
Extensive Airlift Operations will be conducted along the routes indicated on the insert map, which will be designated as Control Areas during the period 10 March 1952 through 15 April 1952. Civil Air Regulations appropriate to flight within Control Areas will apply.
